WEEKLY RETURN OF BIRTHS AND DEATHS
IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF
RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE ;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. I. VOL. LXII.] WEEK ENDED SATURDAY, 10TH JANUARY, 1925. [PRICE 1½d. NET.

*Oifig um Chláru Ghenearála,
Baile Átha Cliath,
An 13adh lá de mhí Eanáir, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·6 and 15·3; Dublin Registration Area, 15·7 and 15·7; Dublin County Borough, 16·3 and 16·2; Cork, 14·3 and 13·5; Limerick, 23·0 and 16·9; and Waterford, 20·9 and 14·7.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·8 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 246—123 boys and 123 girls—and the deaths to 147—77 males and 70 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·7 per 1,000 of the population, the rate for all deaths registered being 17·5.

Included in the 132 deaths appertaining to the Area are 2 from scarlet fever, 2 from whooping-cough, 4 from diarrhoea and enteritis of children under 2 years and 2 from influenza. In the three preceding weeks deaths from whooping-cough were 0, one and 6; deaths from diarrhoea and enteritis of children under 2 years were 6, 5 and one, and deaths from influenza were one, one and 2. There were no deaths from scarlet fever in the three preceding weeks.

Tuberculous disease caused 7 deaths (all of which were from pulmonary tuberculosis), as against 21, 15 and 19 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 16 by diseases of the heart.

There were 14 deaths from pneumonia, comprising 7 from broncho-pneumonia, 3 from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 11 deaths.

Three accidental deaths were registered, one of which was caused by poisoning and one by a motor vehicle.

Among deaths of infants under one year old, one was due to meningitis, 5 to convulsions, 2 to bronchitis, 2 to broncho-pneumonia, 4 to diarrhoea and enteritis, 7 to premature birth, and 3 to congenital debility.

Thirty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 25 being infants under one year, of whom 11 were under one month old, and 43 deaths were those of persons aged 65 years and upwards, of whom 30 were 70 years of age or over.

Of the 132 deaths recorded, 52 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 10th January, in 105 large English towns (including London, in which the rate was 12·5) was equal to an average annual death-rate of 13·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17·3 per 1,000 persons living, the rate for Glasgow being 17·2, and for Edinburgh 16·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 10th January, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dun Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 2. VOL. LXII.] WEEK ENDED SATURDAY, 17TH JANUARY, 1925. [PRICE 1½d. NET.

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
An 20adh lá de mhí Eanáir, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, (a) 14·6 and 14·5; Dublin Registration Area, 15·0 and 15·1; Dublin County Borough, 16·2 and 15·6; Cork, 13·6 and 12·4; Limerick, 10·8 and 16·6; and Waterford, 11·4 and 14·3.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·8 per 1,000. One of the 20 deaths from all causes for Cork was from enteric fever, one of the 8 deaths from all causes for Limerick was from diphtheria and the 2 deaths for Kilkenny included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 216—103 boys and 113 girls—and the deaths to 138—71 males and 67 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·0 per 1,000 of the population. During the two weeks ending with Saturday last, the death rate averaged 15·4 and was 6·0 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the two weeks was 17·0, and during the corresponding periods of the preceding ten years 22·7.

Included in the 126 deaths appertaining to the Area are one from whooping-cough, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years and one from influenza. In the three preceding weeks deaths from whooping-cough were one, 6 and 2; deaths from diarrhoea and enteritis of children under 2 years were 5, one and 4, and deaths from influenza were one, 2 and 2. There were no deaths from diphtheria in the three preceding weeks.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and one from tuberculous nephritis), as against 15, 19 and 7 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 14 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 8 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 21 deaths.

Three accidental deaths were registered, one (that of a child aged 2 years) being caused by scalds.

Among deaths of infants under one year old, one was due to whooping-cough, one to convulsions, one to bronchitis, 2 to broncho-pneumonia, one to pneumonia, 3 to diarrhoea and enteritis, 8 to premature birth, 2 to congenital malformation and one to congenital debility.

Twenty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 11 were under one month old, and 48 deaths were those of persons aged 65 years and upwards, of whom 36 were 70 years of age or over.

Of the 126 deaths recorded, 61 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 17th January, in 105 large English towns (including London, in which the rate was 16·2) was equal to an average annual death-rate of 15·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·8 per 1,000 persons living, the rate for Glasgow being 14·8, and for Edinburgh 13·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

(a) See note (a) at foot of Table II.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 17th January, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undementioned 11 COUNTRY BOROUGHs or URBAN DISTRICTs, and to BELFAST and LONDONDERRY COUNTRY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF
RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE ;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 3. VOL. LXII.] WEEK ENDED SATURDAY, 24TH JANUARY, 1925. [PRICE 1½d. NET.]

*Oifig um Chláru Ghenearála,
Baile Átha Cliath,
An 27adhl lá de mhí Eanáir, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·0 and 16·0 ; Dublin Registration Area, 16·4 and 16·0 ; Dublin County Borough, 18·2 and 17·0 ; Cork, 18·4 and 15·3 ; Limerick, 12·2 and 19·0 ; and Waterford, 9·5 and 15·7.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·5 per 1,000. Two of the 27 deaths from all causes for Cork were from diarrhoea and enteritis of children under 2 years of age.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 243—109 boys and 134 girls—and the deaths to 151—79 males and 72 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·4 per 1,000 of the population. During the three weeks ending with Saturday last, the death rate averaged 15·7 and was 5·8 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the three weeks was 17·3, and during the corresponding periods of the preceding ten years 22·9.

Included in the 138 deaths appertaining to the Area are 2 from diphtheria, 2 from diarrhoea and enteritis of children under 2 years and 4 from influenza. In the three preceding weeks deaths from diphtheria were 0, 0 and one ; deaths from diarrhoea and enteritis of children under 2 years were one, 4 and 5, and deaths from influenza were 2, 2 and one.

Tuberculous disease caused 15 deaths (13 of which were from pulmonary tuberculosis, and 2 from tuberculous meningitis), as against 19, 7 and 13 from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer, and 14 by diseases of the heart.

There were 19 deaths from pneumonia, comprising 12 from broncho-pneumonia, 3 from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 16 deaths.

One accidental death was registered, due to a motor vehicle.

Among deaths of infants under one year old, one was due to influenza; one to meningitis, one to convulsions, 4 to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, 3 to premature birth, 2 to congenital malformation and one to congenital debility.

Twenty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 17 being infants under one year, of whom 7 were under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 30 were 70 years of age or over.

Of the 138 deaths recorded, 61 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 24th January, in 105 large English towns (including London, in which the rate was 14·6) was equal to an average annual death-rate of 14·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·2 per 1,000 persons living, the rate for Glasgow being 15·2, and for Edinburgh 16·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 24th January, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

NO. 4. VOL. LXII.] WEEK ENDED SATURDAY, 31ST JANUARY, 1925. [PRICE 1½d. NET.

*Oifig um Chláráí Ghenearála,
Baile Átha Cliath,*

An 3adh lá de mhí Feabhra, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 20·6 and 16·7; Dublin Registration Area, 20·1 and 16·8; Dublin County Borough, 19·4 and 17·5; Cork, 24·5 and 17·7; Limerick, 25·7 and 17·9; and Waterford, 20·9 and 15·7.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·9 per 1,000. Among the 36 deaths from all causes for Cork were one from diarrhoea and enteritis of a child under 2 years of age, and 3 from influenza, and one of the 6 deaths from all causes for Sligo was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 176—83 boys and 93 girls—and the deaths to 188—95 males and 93 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 20·1 per 1,000 of the population. During the four weeks ending with Saturday last, the death rate averaged 16·8 and was 4·9 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the four weeks was 18·6, and during the corresponding periods of the preceding ten years 23·2.

Included in the 169 deaths appertaining to the Area are one from enteric fever, one from scarlet fever, one from whooping-cough, one from diphtheria, 3 from diarrhoea and enteritis of children under 2 years and 15 from influenza. In the three preceding weeks deaths from scarlet fever were 2, 0 and 0; deaths from whooping-cough were 2, one and 0; deaths from diphtheria were 0, one and 2; deaths from diarrhoea and enteritis of children under 2 years were 4, 5 and 2, and deaths from influenza were 2, one and 4. There were no deaths from enteric fever in the three preceding weeks.

Tuberculous disease caused 27 deaths (22 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and 3 from other forms of tuberculous disease), as against 7, 13 and 15 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 15 by diseases of the heart.

There were 20 deaths from pneumonia, comprising 10 from broncho-pneumonia, 3 from lobar pneumonia and 7 from pneumonia (not otherwise defined). Bronchitis caused 15 deaths.

One accidental death, due to burns, was registered.

Among deaths of infants, under one year old, one was due to bronchitis, 2 to broncho-pneumonia, 3 to diarrhoea and enteritis, 7 to premature birth, one to congenital malformation and one to congenital debility.

Twenty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 8 were under one month old, and 58 deaths were those of persons aged 65 years and upwards, of whom 45 were 70 years of age or over.

Of the 169 deaths recorded, 75 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 31st January, in 105 large English towns (including London, in which the rate was 14·0) was equal to an average annual death-rate of 14·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·3 per 1,000 persons living, the rate for Glasgow being 16·8, and for Edinburgh 14·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 31st January, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTs, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

a) See note at foot of fourth page. *b*) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. *c*) See note (†) at foot of first page. *d*) Observations at Ordnance Survey Office, Phoenix Park. *e*) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). *f*) Botanic Gardens, Kew. *g*) Markree. *h*) Including one death from cerebro-spinal meningitis.

TABLE II.—Showing for the week ended, Saturday, 31st January, 1925, the number of DEATHS* of Residents of the several DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,† the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

[illegible]

* See note at foot of fourth page.

The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1911.

† See note (†) at foot of first page.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 31st January, 1925**, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

*Oifig um Chláirú Ghinearálta,
Baile Átha Cliath,
An 10adh lá de mhí Feabhra, 1925*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 19·9 and 17·8; Dublin Registration Area, 22·0 and 18·4; Dublin County Borough, 21·0 and 18·7; Cork, 15·6 and 18·0; Limerick, 21·7 and 17·6; and Waterford, 20·9 and 15·7.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·8 per 1,000. One of the 10 deaths from all causes for Drogheda was from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 194—104 boys and 90 girls—and the deaths to 199—88 males and 111 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 22·0 per 1,000 of the population. During the five weeks ending with Saturday last, the death rate averaged 17·8 and was 4·0 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the five weeks was 19·6, and during the corresponding periods of the preceding ten years 23·4.

Included in the 185 deaths appertaining to the Area are one from scarlet fever, 2 from whooping-cough, 2 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years and 8 from influenza. In the three preceding weeks deaths from scarlet fever were 0, 0 and one; deaths from whooping-cough were one, 0 and one; deaths from diphtheria were one, 2 and one; deaths from diarrhoea and enteritis of children under 2 years were 5, 2 and 3, and deaths from influenza were one, 4 and 15.

Tuberculous disease caused 25 deaths (20 of which were from pulmonary tuberculosis, and 5 from other forms of tuberculous disease), as against 13, 15 and 27 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 23 by diseases of the heart.

There were 17 deaths from pneumonia, comprising 6 from broncho-pneumonia, 3 from lobar pneumonia and 8 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

Four accidental deaths were registered, three (of children aged 1½ years, 1½ years and 1 year 10 months, respectively) being due to scalds.

Among deaths of infants under one year old, one was due to tuberculosis, one to syphilis, 5 to convulsions, 2 to broncho-pneumonia, 3 to pneumonia, 2 to diarrhoea and enteritis, 7 to premature birth, 2 to congenital malformation and 4 to congenital debility.

Forty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 31 being infants under one year, of whom 13 were under one month old, and 52 deaths were those of persons aged 65 years and upwards, of whom 41 were 70 years of age or over.

Of the 185 deaths recorded, 71 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 7th February, in 105 large English towns (including London, in which the rate was 14·8) was equal to an average annual death-rate of 14·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·9 per 1,000 persons living, the rate for Glasgow being 14·7, and for Edinburgh 15·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE II.—Showing for the week ended, Saturday, 7th February, 1925, the number of DEATHS of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*Oifig um Chlárá Ghinearálta,
Baile Átha Cliath,*

An 17ad lá de mhí Feabhra, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·0 and 18·1; Dublin Registration Area, 15·6 and 18·5; Dublin County Borough, 14·8 and 18·4; Cork, 17·7 and 19·1; Limerick, 19·0 and 19·7; and Waterford, 15·2 and 16·6.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·8 per 1,000. Among the 26 deaths from all causes for Cork were one from diphtheria and one from influenza.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 279—144 boys and 135 girls—and the deaths to 141—65 males and 76 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·6 per 1,000 of the population. During the six weeks ending with Saturday last, the death rate averaged 17·3 and was 4·3 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the six weeks was 19·1, and during the corresponding periods of the preceding ten years 23·3.

Included in the 131 deaths appertaining to the Area are 4 from whooping-cough, 3 from diarrhoea and enteritis of children under 2 years and 6 from influenza. In the three preceding weeks deaths from whooping-cough were 0, one and 2; deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and 3, and deaths from influenza were 4, 15 and 8.

Tuberculous disease caused 18 deaths (15 of which were from pulmonary tuberculosis, and 3 from other forms of tuberculous disease), as against 15, 27 and 25 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 11 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 15 deaths.

Four accidental deaths were registered, one (of a child aged 4 years) being due to scalds.

Among deaths of infants under one year old, one was due to whooping-cough, one to general tuberculosis, 5 to convulsions, one to bronchitis, 2 to broncho-pneumonia, 3 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation and 2 to congenital debility.

Thirty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 22 being infants under one year, of whom 11 were under one month old, and 41 deaths were those of persons aged 65 years and upwards, of whom 31 were 70 years of age or over.

Of the 131 deaths recorded, 43 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 7th February, in 105 large English towns (including London, in which the rate was 14·8) was equal to an average annual death-rate of 14·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland for the week ended 14th February, was 16·6 per 1,000 persons living, the rate for Glasgow being 17·0, and for Edinburgh 18·1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 14th February, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1923. The population given for Glasgow and Edinburgh is that estimated to the middle of 1925. (c) See note (f) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree.

TABLE II.—Showing for the week ended, Saturday, 14th February, 1925, the number of DEATHS of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,

An 24adh lá de mhí Feabhra, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 19·8 and 19·1; Dublin Registration Area, 22·6 and 20·1; Dublin County Borough, 23·2 and 19·6; Cork, 12·9 and 17·7; Limerick, 21·7 and 22·0; and Waterford, 9·5 and 16·6.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·9 per 1,000. One of the 19 deaths from all causes for Cork was from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 212—110 boys and 102 girls—and the deaths to 204—104 males and 100 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 22·6 per 1,000 of the population. During the seven weeks ending with Saturday last, the death rate averaged 18·2 and was 3·6 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the seven weeks was 19·9, and during the corresponding periods of the preceding ten years 23·4.

Included in the 190 deaths appertaining to the Area are 2 from whooping-cough, one from diphtheria, 6 from diarrhoea and enteritis of children under 2 years and 10 from influenza. In the three preceding weeks deaths from whooping-cough were one, 2 and 4; deaths from diphtheria were one, 2 and 0; deaths from diarrhoea and enteritis of children under 2 years were 3, 3 and 3, and deaths from influenza were 15, 8 and 6.

Tuberculous disease caused 23 deaths (17 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 3 from other forms of tuberculous disease), as against 27, 25 and 18 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 14 by diseases of the heart.

There were 18 deaths from pneumonia, comprising 9 from broncho-pneumonia, one from lobar pneumonia and 8 from pneumonia (not otherwise defined). Bronchitis caused 21 deaths.

One accidental death was registered, being caused by a motor-cycle.

Among deaths of infants under one year old, one was due to whooping-cough, one to general tuberculosis, one to meningitis, 3 to convulsions, 2 to broncho-pneumonia, 5 to diarrhoea and enteritis, 6 to premature birth, 3 to congenital malformation and 3 to congenital debility.

Thirty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 29 being infants under one year, of whom 11 were under one month old, and 55 deaths were those of persons aged 65 years and upwards, of whom 41 were 70 years of age or over.

Of the 190 deaths recorded, 78 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 21st February, in 105 large English towns (including London, in which the rate was 14·6) was equal to an average annual death-rate of 14·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·4 per 1,000 persons living, the rate for Glasgow being 13·8, and for Edinburgh 19·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (*a*) during the week ended **Saturday, 21st February, 1925**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*Oifig um Chláirí Ghinearálta,
Baile Átha Cliath,
An 3adh lá de mhí Márta, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 18·1 and 18·5; Dublin Registration Area, 18·6 and 19·7; Dublin County Borough, 18·5 and 19·4; Cork, 13·6 and 15·0; Limerick, 13·5 and 19·0; and Waterford, 33·1 and 20·4.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·3 per 1,000. One of the 20 deaths from all causes for Cork was from diphtheria. Among the 10 deaths from all causes for Limerick were one from enteric fever and 2 from diphtheria, and among the 19 deaths for Waterford were one from influenza and one from diarrhoea and enteritis of a child under 2 years, and among the 8 deaths for Dundalk were one from enteric fever and one from influenza.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 222—105 boys and 117 girls—and the deaths to 175—92 males and 83 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·6 per 1,000 of the population. During the eight weeks ending with Saturday last, the death rate averaged 18·3 and was 3·9 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the eight weeks was 20·0, and during the corresponding periods of the preceding ten years 23·8.

Included in the 156 deaths appertaining to the Area are one from measles, one from scarlet fever, 3 from whooping-cough, one from diphtheria, 5 from diarrhoea and enteritis of children under 2 years and 7 from influenza. In the three preceding weeks deaths from scarlet fever were one, 0 and 0; deaths from whooping-cough were 2, 4 and 2; deaths from diphtheria were 2, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 3, 3 and 6, and deaths from influenza were 8, 6 and 10. There were no deaths from measles in the three preceding weeks.

Tuberculous disease caused 20 deaths (17 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 25, 18 and 23 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 19 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 12 from broncho-pneumonia, one from lobar pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 11 deaths.

No deaths from violence were registered.

Among deaths of infants under one year old, one was due to whooping-cough, one to diphtheria, one to meningitis, 3 to convulsions, one to bronchitis, 3 to broncho-pneumonia, 5 to diarrhoea and enteritis, 7 to premature birth, 2 to congenital malformation and 2 to congenital debility.

Thirty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 27 being infants under one year, of whom 11 were under one month old, and 44 deaths were those of persons aged 65 years and upwards, of whom 30 were 70 years of age or over.

Of the 156 deaths recorded, 67 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 28th February, in 105 large English towns (including London, in which the rate was 14·8) was equal to an average annual death-rate of 15·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·5 per 1,000 persons living, the rate for Glasgow being 15·7, and for Edinburgh 18·4.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE II.—Showing for the week ended, Saturday, 28th February, 1925, the number of DEATHS of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

An 10adh lá de mhí Márta, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 17·5 and 17·9; Dublin Registration Area, 16·8 and 18·4; Dublin County Borough, 17·6 and 18·5; Cork, 25·8 and 17·5; Limerick, 14·9 and 17·3; and Waterford, 17·1 and 19·5.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·5 per 1,000. One of the 38 deaths from all causes for Cork was from influenza. Among the 9 deaths from all causes for Waterford were 3 from influenza, one of the 4 deaths for Drogheda was from influenza, and among the 4 deaths for Sligo were one from influenza and one from diarrhoea of a child under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 276—145 boys and 131 girls—and the deaths to 151—68 males and 83 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·8 per 1,000 of the population. During the nine weeks ending with Saturday last, the death rate averaged 18·1 and was 4·5 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the nine weeks was 19·8, and during the corresponding periods of the preceding ten years 24·2.

Included in the 141 deaths appertaining to the Area are one from measles, 2 from whooping-cough, 2 from diarrhoea and enteritis of children under 2 years and 6 from influenza. In the three preceding weeks deaths from measles were 0, 0 and one; deaths from whooping-cough were 4, 2 and 3; deaths from diarrhoea and enteritis of children under 2 years were 3, 6 and 5, and deaths from influenza were 6, 10 and 7.

Tuberculous disease caused 15 deaths (10 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 18, 23 and 20 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 17 by diseases of the heart.

There were 18 deaths from pneumonia, comprising 10 from broncho-pneumonia, 2 from lobar pneumonia and 6 from pneumonia (not otherwise defined). Bronchitis caused 16 deaths.

Three accidental deaths were registered, including 2 (of which one was of a child aged 3½ years) due to burns.

Among deaths of infants under one year old, 4 were due to convulsions, 3 to bronchitis, one to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, 2 to premature birth, 2 to congenital malformation and 3 to congenital debility.

Thirty-three of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 8 were under one month old, and 45 deaths were those of persons aged 65 years and upwards, of whom 36 were 70 years of age or over.

Of the 141 deaths recorded, 64 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 7th March, in 105 large English towns (including London, in which the rate was 13·7) was equal to an average annual death-rate of 15·0 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·1 per 1,000 persons living, the rate for Glasgow being 15·1, and for Edinburgh 15·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 7th March, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

| Scarlet Fever, | 85 | 94 | 83 | 14 | 11 | . | 86* |
| Diphtheria, | 54 | 57 | 50 | 8 | 9 | . | 49 |
| Pneumonia, | 22 | 17 | 18 | 9 | 6 | 1 | 20 |

* Exclusive of 8 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 17·7 and 18·3; Dublin Registration Area, 16·9 and 18·7; Dublin County Borough, 16·8 and 19·0; Cork, 23·8 and 19·0; Limerick, 25·7 and 19·0; and Waterford, 17·1 and 20·0.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·4 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 217—119 boys and 98 girls—and the deaths to 158—88 males and 70 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·9 per 1,000 of the population. During the ten weeks ending with Saturday last, the death rate averaged 18·0 and was 5·0 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the ten weeks was 19·7, and during the corresponding periods of the preceding ten years 24·6.

Included in the 142 deaths appertaining to the Area are 2 from whooping-cough, one from diphtheria, 2 from diarrhoea and enteritis of children under 2 years and 6 from influenza. In the 3 preceding weeks deaths from whooping-cough were 2, 3 and 2, deaths from diphtheria were one, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 6, 5 and 2; and deaths from influenza were 10, 7 and 6.

Tuberculous disease caused 22 deaths (16 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 4 from other forms of tuberculous disease), as against 23, 20 and 15 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 16 by diseases of the heart.

There were 18 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar pneumonia and 12 from pneumonia (not otherwise defined). Bronchitis caused 13 deaths.

Two accidental deaths were registered, including one due to burns.

Among deaths of infants under one year old, one was due to whooping-cough, one to meningitis, one to convulsions, 2 to broncho-pneumonia, 3 to pneumonia, 2 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation and 4 to congenital debility.

Twenty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 20 being infants under one year, of whom 5 were under one month old, and 52 deaths were those of persons aged 65 years and upwards, of whom 35 were 70 years of age or over.

Of the 142 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 14th March, in 105 large English towns (including London, in which the rate was 13·4) was equal to an average annual death-rate of 14·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·0 per 1,000 persons living, the rate for Glasgow being 15·6, and for Edinburgh 19·6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1923. The population given for Glasgow and Edinburgh is that estimated to the middle of 1925. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Kew. (g) Markree.

TABLE II.—Showing for the week ended, Saturday, 14th March, 1925, the number of DEATHS of Residents of the several DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

No. 11. VOL. LXII.] WEEK ENDED SATURDAY, 21ST MARCH, 1925. [PRICE 1½d. NET.]

*Oifig um Chláirú Ghenearála,
Baile Átha Cliath,
An 24adh lá de mhí Márta, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 18·7 and 18·0; Dublin Registration Area, 19·4 and 17·9; Dublin County Borough, 20·4 and 18·3; Cork, 17·7 and 20·2; Limerick, 20·3 and 18·6; and Waterford, 5·7 and 19·0.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·8 per 1,000. One of the three deaths from all causes for Sligo was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 240—121 boys and 119 girls—and the deaths to 174—87 males and 87 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 19·4 per 1,000 of the population. During the eleven weeks ending with Saturday last, the death rate averaged 18·1 and was 4·9 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the eleven weeks was 19·8, and during the corresponding periods of the preceding ten years 24·7.

Included in the 163 deaths appertaining to the Area are one from measles, 5 from whooping-cough, 3 from diarrhoea and enteritis of children under 2 years and 3 from influenza. In the 3 preceding weeks deaths from measles were one, one and 0, deaths from whooping-cough were 3, 2 and 2; deaths from diarrhoea and enteritis of children under 2 years were 5, 2 and 2; and deaths from influenza were 7, 6 and 6.

One death from encephalitis lethargica and one death from cerebro-spinal meningitis were registered.

Tuberculous disease caused 20 deaths (14 of which were from pulmonary tuberculosis, 5 from tuberculous meningitis, and one from abdominal tuberculosis), as against 20, 15 and 22 from all forms of tuberculosis in the three weeks preceding.

Sixteen deaths were caused by cancer, and 17 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 3 from broncho-pneumonia, 2 from lobar pneumonia and 6 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

One accidental death was registered.

Among deaths of infants under one year old, 2 were due to whooping-cough, one to influenza, one to cerebro-spinal meningitis, one to congenital lues, one to meningitis, 4 to convulsions, 2 to bronchitis, one to broncho-pneumonia, 2 to pneumonia, 2 to diarrhoea and enteritis, 8 to premature birth, 3 to congenital malformation and 3 to congenital debility.

Forty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 35 being infants under one year, of whom 20 were under one month old, and 48 deaths were those of persons aged 65 years and upwards, of whom 38 were 70 years of age or over.

Of the 163 deaths recorded, 60 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 21st March, in 105 large English towns (including London, in which the rate was 13·7) was equal to an average annual death-rate of 15·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15·9 per 1,000 persons living, the rate for Glasgow being 15·7, and for Edinburgh 18·2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE II.—Showing for the week ended, Saturday, 21st March, 1925, the number of DEATHS of Residents of the several DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF DORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

[illegible]

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 18·5 and 18·1; Dublin Registration Area, 19·0 and 18·0; Dublin County Borough, 20·1 and 18·7; Cork, 20·4 and 21·9; Limerick, 13·5 and 18·6; and Waterford, 20·9 and 15·2.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·9 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 237—116 boys and 121 girls—and the deaths to 170—86 males and 84 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 19·0 per 1,000 of the population. During the twelve weeks ending with Saturday last, the death rate averaged 18·2 and was 5·0 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twelve weeks was 19·8, and during the corresponding periods of the preceding ten years 24·9.

Included in the 160 deaths appertaining to the Area are 2 from scarlet fever, 5 from whooping-cough, 5 from diarrhoea and enteritis of children under 2 years and 2 from influenza. In the 3 preceding weeks deaths from whooping-cough were 2, 2 and 5; deaths from diarrhoea and enteritis of children under 2 years were 2, 2 and 3; and deaths from influenza were 6, 6 and 3. There were no deaths from scarlet fever in the three preceding weeks.

Tuberculous disease caused 18 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, one from abdominal tuberculosis, and 4 from other forms of tuberculosis), as against 15, 22 and 20 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 22 by diseases of the heart.

There were 20 deaths from pneumonia, comprising 12 from broncho-pneumonia, 2 from lobar pneumonia and 6 from pneumonia (not otherwise defined). Bronchitis caused 21 deaths.

Two accidental deaths were registered, one of which was caused by drowning.

Among deaths of infants under one year old, 3 were due to whooping-cough, 4 to convulsions, 2 to bronchitis, 6 to broncho-pneumonia, 2 to pneumonia, 5 to diarrhoea and enteritis, 5 to premature birth, and one to congenital debility.

Forty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 31 being infants under one year, of whom 5 were under one month old, and 44 deaths were those of persons aged 65 years and upwards, of whom 29 were 70 years of age or over.

Of the 160 deaths recorded, 56 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 28th March, in 105 large English towns (including London, in which the rate was 12·6) was equal to an average annual death-rate of 14·3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·3 per 1,000 persons living, the rate for Glasgow being 14·3, and for Edinburgh 12·6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

and DEATHS registered (a) during the week ended Saturday, 28th March, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHS or URBAN AREAS, and to BELFAST and LONDONDERRY COUNTY BOROUGHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 20 patients in " Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Eray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·9 and 18·0; Dublin Registration Area, 15·1 and 17·6; Dublin County Borough, 15·2 and 18·1; Cork, 21·8 and 20·9; Limerick, 20·3 and 20·0; and Waterford, 20·9 and 16·2.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·3 per 1,000. Two deaths from influenza were recorded for Limerick and 2 for Waterford.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 248—125 boys and 123 girls—and the deaths to 141—78 males and 63 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·1 per 1,000 of the population. During the thirteen weeks ending with Saturday last, the death rate averaged 17·9 and was 5·2 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirteen weeks was 19·6, and during the corresponding periods of the preceding ten years 24·8.

Included in the 127 deaths appertaining to the Area are one from enteric fever, one from measles, 2 from scarlet fever, 4 from whooping-cough, 6 from diarrhoea and enteritis of children under 2 years and 6 from influenza. In the 3 preceding weeks deaths from measles were 0, one and 0; deaths from scarlet fever were 0, 0 and 2; deaths from whooping-cough were 2, 5 and 5; deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and 5; and deaths from influenza were 6, 3 and 2. There were no deaths from enteric fever in the three preceding weeks.

Tuberculous disease caused 21 deaths (15 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis and 3 from other forms of tuberculosis), as against 22, 20 and 18 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 12 by diseases of the heart.

There were 17 deaths from pneumonia, comprising 12 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

Three accidental deaths were registered, one of which was caused by burns, and there was one death by suicide.

Among deaths of infants under one year old, one was due to measles, 2 were due to whooping-cough, one to influenza, 3 to convulsions, one to bronchitis, 4 to broncho-pneumonia, one to pneumonia, 6 to diarrhoea and enteritis, 4 to premature birth, one to congenital malformation, and one to congenital debility.

Thirty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 25 being infants under one year, of whom 6 were under one month old, and 31 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 127 deaths recorded, 49 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 4th April, in 105 large English towns (including London, in which the rate was 13·2) was equal to an average annual death-rate of 14·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·6 per 1,000 persons living, the rate for Glasgow being 15·4, and for Edinburgh 16·2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE II.—Showing for the week ended, Saturday, 4th April, 1925, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases†; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

An 15adh lá de mhí Aibreáin, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 18·8 and 18·1; Dublin Registration Area, 18·9 and 18·1; Dublin County Borough, 20·1 and 19·0; Cork, 19·0 and 19·7; Limerick, 25·7 and 20·0; and Waterford, 9·5 and 14·3.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·3 per 1,000. Among the 28 deaths from all causes for Cork were two from enteric fever and one from influenza, and among the 19 deaths for Limerick was one from influenza.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 231—112 boys and 119 girls—and the deaths to 175—77 males and 98 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 18·9 per 1,000 of the population. During the fourteen weeks ending with Saturday last, the death rate averaged 18·0 and was 5·1 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the fourteen weeks was 19·7, and during the corresponding periods of the preceding ten years 24·8.

Included in the 159 deaths appertaining to the Area are 2 from measles, 7 from whooping-cough, 3 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years and 4 from influenza. In the 3 preceding weeks deaths from measles were one, 0 and one; deaths from whooping-cough were 5, 5 and 4; deaths from diarrhoea and enteritis of children under 2 years were 3, 5 and 6; and deaths from influenza were 3, 2 and 6. There were no deaths from diphtheria in the three preceding weeks.

Tuberculous disease caused 22 deaths (18 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and 2 from other forms of tuberculosis), as against 20, 18 and 21 from all forms of tuberculosis in the three weeks preceding.

Three deaths were caused by cancer, and 14 by diseases of the heart.

There were 24 deaths from pneumonia, comprising 14 from broncho-pneumonia, 3 from lobar pneumonia and 7 from pneumonia (not otherwise defined). Bronchitis caused 18 deaths.

Two accidental deaths were registered, both of which were caused by drowning.

Among deaths of infants under one year old, 2 were due to measles, 4 to whooping-cough, one to diphtheria, 2 to meningitis, 2 to convulsions, 2 to bronchitis, 4 to broncho-pneumonia, one to lobar pneumonia, 2 to pneumonia, 2 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation, and 2 to congenital debility.

Fifty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 31 being infants under one year, of whom 8 were under one month old, and 41 deaths were those of persons aged 65 years and upwards, of whom 30 were 70 years of age or over.

Of the 159 deaths recorded, 55 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 11th April, in 105 large English towns (including London, in which the rate was 12·0) was equal to an average annual death-rate of 14·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·2 per 1,000 persons living, the rate for Glasgow being 15·9, and for Edinburgh 15·4.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 11th April, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
An 21adhl lá de mhí Aibreáin, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·8 and 17·6; Dublin Registration Area, 17·3 and 17·6; Dublin County Borough, 17·4 and 18·2; Cork, 16·3 and 19·4; Limerick, 14·9 and 18·6; and Waterford, 20·9 and 18·1.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·2 per 1,000. There was one death from influenza in each of Limerick, Waterford and Galway.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 187—91 boys and 96 girls—and the deaths to 157—82 males and 75 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 17·3 per 1,000 of the population. During the fifteen weeks ending with Saturday last, the death rate averaged 18·0 and was 5·1 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the fifteen weeks was 19·6, and during the corresponding periods of the preceding ten years 24·8.

Included in the 145 deaths appertaining to the Area are 2 from measles, 6 from whooping-cough, 6 from diarrhoea and enteritis of children under 2 years and 3 from influenza. In the 3 preceding weeks deaths from measles were 0, one and 2; deaths from whooping-cough were 5, 4 and 7; deaths from diarrhoea and enteritis of children under 2 years were 5, 6 and 3; and deaths from influenza were 2, 6 and 4.

One death from encephalitis lethargica and one from cerebro spinal meningitis were registered.

Tuberculous disease caused 12 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 2 from other forms of tuberculosis), as against 18, 21 and 22 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer, and 14 by diseases of the heart.

There were 19 deaths from pneumonia, comprising 6 from broncho-pneumonia, 2 from lobar pneumonia and 11 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

One death by violence was registered, being due to a cycling accident.

Among deaths of infants under one year old, 3 were due to whooping-cough, one to broncho-pneumonia, 2 to pneumonia, 5 to diarrhoea and enteritis, 6 to premature birth, one to congenital malformation, and 2 to congenital debility.

Thirty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 8 were under one month old, and 40 deaths were those of persons aged 65 years and upwards, of whom 33 were 70 years of age or over.

Of the 145 deaths recorded, 55 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 18th April, in 105 large English towns (including London, in which the rate was 12·0) was equal to an average annual death-rate of 13·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·5 per 1,000 persons living, the rate for Glasgow being 13·9, and for Edinburgh 14·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 18th April, 1925**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 16. VOL. LXII.] WEEK ENDED SATURDAY, 25TH APRIL, 1925. [PRICE 1½d. NET.

*Oifig um Chláir Ghinearálta,
Baile Átha Cliath,
28adh lá de mhí Aibreáin, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·6 and 16·7; Dublin Registration Area, 15·7 and 16·8; Dublin County Borough, 16·2 and 17·2; Cork, 12·2 and 17·3; Limerick, 9·5 and 17·6; and Waterford, 15·2 and 16·6.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·2 per 1,000. One of the 2 deaths for Clonmel was from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 269—133 boys and 136 girls—and the deaths to 144—69 males and 75 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·7 per 1,000 of the population. During the sixteen weeks ending with Saturday last, the death rate averaged 17·8 and was 5·3 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the sixteen weeks was 19·4, and during the corresponding periods of the preceding ten years 24·8.

Included in the 132 deaths appertaining to the Area are 4 from measles, 7 from whooping-cough, one from diphtheria, one from diarrhoea and enteritis of a child under 2 years and 2 from influenza. In the 3 preceding weeks deaths from measles were one, 2 and 2; deaths from whooping-cough were 4, 7 and 6; deaths from diphtheria were 0, 3 and 0; deaths from diarrhoea and enteritis of children under 2 years were 6, 3 and 6; and deaths from influenza were 6, 4 and 3.

Tuberculous disease caused 14 deaths (12 of which were from pulmonary tuberculosis and 2 from tuberculous meningitis), as against 21, 22 and 12 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 18 by diseases of the heart.

There were 18 deaths from pneumonia, comprising 9 from broncho-pneumonia, 5 from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

One accidental death was registered, and there was one death by suicide.

Among deaths of infants under one year old, 2 were due to measles, 4 to whooping-cough, one to tuberculosis, one to sarcoma, 3 to convulsions, 3 to bronchitis, 6 to broncho-pneumonia, one to pneumonia, one to enteritis, 7 to premature birth, 2 to congenital malformation, and 2 to congenital debility.

Forty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 36 being infants under one year, of whom 12 were under one month old, and 32 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 132 deaths recorded, 61 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 25th April, in 105 large English towns (including London, in which the rate was 11·0) was equal to an average annual death-rate of 12·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·9 per 1,000 persons living, the rate for Glasgow being 15·5, and for Edinburgh 14·4.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 25th April, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 14 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
5adh lá de mhí Bealtaine, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·4 and 16·5; Dublin Registration Area, 16·4 and 17·1; Dublin County Borough, 17·1 and 17·7; Cork, 14·3 and 15·5; Limerick, 25·7 and 19·0; and Waterford, 17·1 and 15·7.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 21 deaths from all causes for Cork were one from whooping-cough and one from diphtheria, and one of the 19 deaths from all causes for Limerick was from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 250—125 boys and 125 girls—and the deaths to 154—76 males and 78 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·4 per 1,000 of the population. During the seventeen weeks ending with Saturday last, the death rate averaged 17·7 and was 5·1 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the seventeen weeks was 19·4, and during the corresponding periods of the preceding ten years 24·5.

Included in the 138 deaths appertaining to the Area are 2 from measles, one from scarlet fever, 5 from whooping-cough, 3 from diarrhoea and enteritis of children under 2 years and one from influenza. In the 3 preceding weeks deaths from measles were 2, 2 and 4; deaths from whooping-cough were 7, 6 and 7; deaths from diarrhoea and enteritis of children under 2 years were 3, 6 and one; and deaths from influenza were 4, 3 and 2. There were no deaths from scarlet fever in the three preceding weeks.

Tuberculous disease caused 22 deaths (16 of which were from pulmonary tuberculosis, 3 from abdominal tuberculosis and 3 from other forms of tuberculous disease), as against 22, 12 and 14 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 18 by diseases of the heart.

There were 19 deaths from pneumonia, comprising 9 from broncho-pneumonia, 2 from lobar pneumonia and 8 from pneumonia (not otherwise defined). Bronchitis caused 11 deaths.

No deaths from violence were registered.

Among deaths of infants under one year old, 2 were due to whooping-cough, 2 to convulsions, 2 to bronchitis, 4 to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, 5 to congenital malformation, and 3 to congenital debility.

Thirty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 22 being infants under one year, of whom 6 were under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 28 were 70 years of age or over.

Of the 138 deaths recorded, 62 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 2nd May, in 105 large English towns (including London, in which the rate was 10·5) was equal to an average annual death-rate of 11·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·6 per 1,000 persons living, the rate for Glasgow being 13·0, and for Edinburgh 14·6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 2nd May, 1925**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHS or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
12adh lá de mhí Bealtaine, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·9 and 16·2; Dublin Registration Area, 16·3 and 16·4; Dublin County Borough, 15·7 and 16·6; Cork, 16·3 and 14·8; Limerick, 16·2 and 16·6; and Waterford, 15·2 and 17·1.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·5 per 1,000. Among the 24 deaths from all causes for Cork was one from whooping-cough and one of the 2 deaths for Tralee was from influenza, and one from diarrhoea and enteritis of a child under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 243—116 boys and 127 girls—and the deaths to 154—84 males and 70 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·3 per 1,000 of the population. During the eighteen weeks ending with Saturday last, the death rate averaged 17·7 and was 4·9 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the eighteen weeks was 19·3, and during the corresponding periods of the preceding ten years 24·3.

Included in the 137 deaths appertaining to the Area are 5 from measles, one from scarlet fever, 7 from whooping-cough, one from diphtheria, 2 from diarrhoea and enteritis of children under 2 years and one from influenza. In the 3 preceding weeks deaths from measles were 2, 4 and 2; deaths from scarlet fever were 0, 0 and 1; deaths from whooping-cough were 6, 7 and 5; deaths from diphtheria were 0, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 6, 1 and 3; and deaths from influenza were 3, 2 and one.

Tuberculous disease caused 20 deaths (18 of which were from pulmonary tuberculosis, and 2 from tuberculous meningitis), as against 12, 14 and 22, from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 17 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 8 from broncho-pneumonia, one from lobar pneumonia and 4 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

Two accidental deaths were registered, one of which (that of a child aged 3½ years) was due to scalds, and there was also one death by suicide.

Among deaths of infants under one year old, one was due to measles, 3 were due to whooping-cough, 2 to convulsions, one to bronchitis, 3 to broncho-pneumonia, one to pneumonia, one to diarrhoea and enteritis, one to premature birth and 5 to congenital debility.

Forty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 20 being infants under one year, of whom 5 were under one month old, and 40 deaths were those of persons aged 65 years and upwards, of whom 34 were 70 years of age or over.

Of the 137 deaths recorded, 42 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 9th May, in 105 large English towns (including London, in which the rate was 11·0) was equal to an average annual death-rate of 12·4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·6 per 1,000 persons living, the rate for Glasgow being 14·3, and for Edinburgh 13·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 9th May, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 13·9 and 15·5; Dublin Registration Area, 13·8 and 15·6; Dublin County Borough, 15·2 and 16·1; Cork, 13·6 and 14·1; Limerick, 13·5 and 16·2; and Waterford, 9·5 and 14·3.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 3 deaths from all causes for Dundalk was one from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 218—117 boys and 101 girls—and the deaths to 133—68 males and 65 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·8 per 1,000 of the population. During the nineteen weeks ending with Saturday last, the death rate averaged 17·5 and was 5·0 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the nineteen weeks was 19·1, and during the corresponding periods of the preceding ten years 24·3.

Included in the 116 deaths appertaining to the Area are 3 from measles, 5 from whooping-cough, and 4 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 4, 2 and 5; deaths from whooping-cough were 7, 5 and 7; and deaths from diarrhoea and enteritis of children under 2 years were one, 3 and 2.

Tuberculous disease caused 20 deaths (15 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis and 2 from other forms of tuberculous disease), as against 14, 22 and 20 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer, and 12 by diseases of the heart.

There were 7 deaths from broncho-pneumonia, and 7 from bronchitis.

Two accidental deaths were registered, one (that of a child aged 3 years) being caused by burns and one by a train.

Among deaths of infants under one year old, 2 were due to whooping-cough, one to tuberculous meningitis, one to convulsions, 2 to broncho-pneumonia, 3 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation and 2 to congenital debility.

Thirty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 18 being infants under one year, of whom 8 were under one month old, and 34 deaths were those of persons aged 65 years and upwards, of whom 20 were 70 years of age or over.

Of the 116 deaths recorded, 32 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 16th May in 105 large English towns (including London, in which the rate was 10·0) was equal to an average annual death-rate of 11·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·8 per 1,000 persons living, the rate for Glasgow being 13·9, and for Edinburgh 13·2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE II.—Showing for the week ended, **Saturday, 16th May, 1925**, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTRY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, *the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.*

[illegible]

* See note at foot of fourth page.

† The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1911.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·8 and 15·0; Dublin Registration Area, 13·2 and 14·9; Dublin County Borough, 14·5 and 15·6; Cork, 16·3 and 15·1; Limerick, 9·5 and 16·2; and Waterford, 5·7 and 11·9.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 5 deaths from all causes for Drogheda was one from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 242—116 boys and 126 girls—and the deaths to 120—61 males and 59 females.

The deaths registered, omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·2 per 1,000 of the population. During the twenty weeks ending with Saturday last, the death rate averaged 17·2 and was 5·2 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty weeks was 18·9, and during the corresponding periods of the preceding ten years 24·1.

Included in the 111 deaths appertaining to the Area are 3 from measles, 5 from whooping-cough, 2 from diphtheria, 4 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 2, 5 and 3; deaths from whooping-cough were 5, 7 and 5; deaths from diphtheria were 0, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 3, 2 and 4; and deaths from influenza were one, one and 0.

Tuberculous disease caused 16 deaths (9 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis and 3 from other forms of tuberculous disease), as against 22, 20 and 20 from all forms of tuberculosis in the three weeks preceding.

Two deaths were caused by cancer, and 14 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 3 from broncho-pneumonia, 3 from lobar-pneumonia and 7 from pneumonia (not otherwise defined). Bronchitis caused 10 deaths.

Four accidental deaths were registered, one (that of a child aged 2 years 10 months) being caused by burns and one (that of a child aged 3 years) being caused by scalds, and there was also one death by suicide.

Among deaths of infants under one year old, one was due to measles, 4 were due to whooping-cough, one to tuberculous meningitis, one to bronchitis, one to broncho-pneumonia, one to pneumonia, 4 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation and one to congenital debility.

Thirty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 7 were under one month old, and 28 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 111 deaths recorded, 44 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 23rd May in 105 large English towns (including London, in which the rate was 10·2) was equal to an average annual death-rate of 11·3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·3 per 1,000 persons living, the rate for Glasgow being 13·2, and for Edinburgh 12·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 28rd May, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 23 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·0 and 14·6; Dublin Registration Area, 15·8 and 14·8; Dublin County Borough, 15·7 and 15·3; Cork, 12·2 and 14·6; Limerick, 16·2 and 13·9; and Waterford, 13·3 and 10·9.

The deaths from the principal epidemic diseases†, recorded for the 12 Town Districts during last week were equal to an annual rate of 0·9 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 309—150 boys and 159 girls—and the deaths to 149—75 males and 74 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·8 per 1,000 of the population. During the twenty-one weeks ending with Saturday last, the death rate averaged 17·2 and was 4·9 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-one weeks was 18·8, and during the corresponding periods of the preceding ten years 23·8.

Included in the 133 deaths appertaining to the Area are 6 from measles, 3 from scarlet fever, one from whooping-cough, one from diarrhoea and enteritis of a child under 2 years, and one from encephalitis lethargica. In the 3 preceding weeks deaths from measles were 5, 3 and 3; deaths from scarlet fever were one, 0 and 0; deaths from whooping-cough were 7, 5 and 5; and deaths from diarrhoea and enteritis of children under 2 years were 2, 4 and 4. There were no deaths from encephalitis lethargica registered in the preceding three weeks.

Tuberculous disease caused 16 deaths (13 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 2 from other forms of tuberculous disease), as against 20, 20 and 16 from all forms of tuberculosis in the three weeks preceding.

Four deaths were caused by cancer, and 20 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar-pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

Four accidental deaths were registered, one of which was by drowning and one was caused by a motor-car.

Among deaths of infants under one year old, two were due to measles, one to whooping-cough, one to erysipelas, one to convulsions, one to pneumonia, one to diarrhoea and enteritis, one to premature birth, one to congenital malformation and 8 to congenital debility.

Thirty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 18 being infants under one year, of whom 7 were under one month old, and 40 deaths were those of persons aged 65 years and upwards, of whom 32 were 70 years of age or over.

Of the 133 deaths recorded, 52 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 30th May in 105 large English towns (including London, in which the rate was 9·9) was equal to an average annual death-rate of 10·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·1 per 1,000 persons living, the rate for Glasgow being 12·2, and for Edinburgh 11·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 30th May, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHS or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

| URBAN AREAS | POPULATION. | | Annual Rate per 1,000 Persons Represented by | | BIRTHS | | DEATHS. | | | | | | | | | | | | DEATHS. | | | | | | | | | | | | DEATHS. | | | | | | | | | | | | DEATHS. | | TABLE II.—Showing for the week ended, Saturday, 30th May, 1925, the number of DEATHS of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF DORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, *the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.*

[illegible]

* See note at foot of fourth page.

† The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1911.

† See note (†) at foot of first page.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 30th May, 1925**, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 22. VOL. LXII.] WEEK ENDED SATURDAY, 6TH JUNE, 1925. [PRICE 1½d. NET.]

*Oifig um Chláirú Ghinearálta,
Baile Átha Cliath,
9adh lá de mhí Meitheamh, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·5 and 13·6; Dublin Registration Area, 13·7 and 14·1; Dublin County Borough, 13·1 and 14·6; Cork, 14·3 and 14·1; Limerick, 14·9 and 13·5; and Waterford, 3·8 and 8·1.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 219—128 boys and 91 girls—and the deaths to 132—70 males and 62 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·7 per 1,000 of the population. During the twenty-two weeks ending with Saturday last, the death rate averaged 17·0 and was 4·8 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-two weeks was 18·7, and during the corresponding periods of the preceding ten years, 23·5.

Included in the 115 deaths appertaining to the Area are 9 from measles, one from scarlet fever, one from whooping-cough, one from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 3, 3 and 6; deaths from scarlet fever were 0, 0 and 3; deaths from whooping-cough were 5, 5 and one; deaths from diphtheria were 0, 2 and 0; deaths from diarrhoea and enteritis of children under 2 years were 4, 4 and one, and deaths from influenza were 0, one and 0.

Tuberculous disease caused 26 deaths (19 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and 5 from other forms of tuberculous disease), as against 20, 16 and 16 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 13 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 7 from broncho-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

One death by suicide was recorded.

Among deaths of infants under one year old, one was due to measles, one to convulsions, one to bronchitis, 3 to broncho-pneumonia, one to pneumonia, 3 to diarrhoea and enteritis, one to premature birth, and 3 to congenital debility.

Thirty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 17 being infants under one year, of whom 2 were under one month old, and 21 deaths were those of persons aged 65 years and upwards, of whom 11 were 70 years of age or over.

Of the 115 deaths recorded, 44 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 6th June in 105 large English towns (including London, in which the rate was 8·9) was equal to an average annual death-rate of 9·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·0 per 1,000 persons living, the rate for Glasgow being 12·3, and for Edinburgh 13·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoea diseases.

TABLE I.—BIRTHS and DEATHS registered (*a*) during the week ended Saturday, 6th June, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1924. The population given for Glasgow and Edinburgh is that estimated to the middle of 1925. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including 2 deaths from cerebro-spinal meningitis.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 6th June, 1925**, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

No. 23. VOL. LXII.] WEEK ENDED SATURDAY, 13TH JUNE, 1925. [PRICE 1½d. NET.

*Oifig um Chláráí Ghinearálta,
Baile Átha Cliath,
16adh lá de mhí Meitheamh, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·9 and 14·5; Dublin Registration Area, 15·8 and 14·6; Dublin County Borough, 16·8 and 14·9; Cork, 13·6 and 14·1; Limerick, 13·5 and 13·5; and Waterford, 20·9 and 10·9.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·8 per 1,000. Among the 10 deaths from all causes registered for Limerick is one from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 279—134 boys and 145 girls—and the deaths to 146—83 males and 63 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·8 per 1,000 of the population. During the twenty-three weeks ending with Saturday last, the death rate averaged 17·0 and was 4·5 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-three weeks was 18·6, and during the corresponding periods of the preceding ten years, 23·3.

Included in the 133 deaths appertaining to the Area are 10 from measles, one from scarlet fever, 4 from whooping-cough, 3 from diphtheria, one from diarrhoea and enteritis of a child under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 3, 6 and 9; deaths from scarlet fever were 0, 3 and one; deaths from whooping-cough were 5, one and one; deaths from diphtheria were 2, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 4, one and 3, and deaths from influenza were one, 0 and one.

Tuberculous disease caused 17 deaths (15 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from general tuberculosis), as against 16, 16 and 26, from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 11 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 8 from broncho-pneumonia, 2 from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

There were 6 accidental deaths recorded, 2 being deaths of children aged 5 years and one year, respectively, from scalds, and there was one death by drowning.

Among deaths of infants under one year old, one was due to measles, 4 to whooping-cough, one to tuberculous meningitis, 3 to convulsions, one to bronchitis, one to broncho-pneumonia, one to diarrhoea and enteritis, 4 to premature birth, and one to congenital debility.

Forty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 19 being infants under one year, of whom 6 were under one month old, and 37 deaths were those of persons aged 65 years and upwards, of whom 32 were 70 years of age or over.

Of the 133 deaths recorded, 60 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 13th June in 105 large English towns (including London, in which the rate was 9·7) was equal to an average annual death-rate of 10·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·9 per 1,000 persons living, the rate for Glasgow being 13·6, and for Edinburgh 13·1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE II.—Showing for the week ended, Saturday, 13th June, 1925, the number of DEATHS of Residents of the several DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTRY Borough of CORK,* the annual Rate per 1,000 of the Population of the respective DISTRICTS represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain one-periods and the number of Uncertified Deaths, the Deaths from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correct on for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 24. VOL. LXII.] WEEK ENDED SATURDAY, 20TH JUNE, 1925. [PRICE 1½d. NET.

*Oifig um Chláirú Ghenearála,
Baile Átha Cliath,
23adh lá de mhí Meitheamh, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·2 and 14·4; Dublin Registration Area, 13·1 and 14·6; Dublin County Borough, 13·1 and 14·6; Cork, 15·6 and 13·9; Limerick, 13·5 and 14·5; and Waterford, 11·4 and 12·4.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·9 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 238—126 boys and 112 girls—and the deaths to 122—52 males and 70 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·1 per 1,000 of the population. During the twenty-four weeks ending with Saturday last, the death rate averaged 16·8 and was 4·5 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-four weeks was 18·5, and during the corresponding periods of the preceding ten years, 23·0.

Included in the 110 deaths appertaining to the Area are 5 from measles, 3 from whooping-cough, 2 from diarrhoea and enteritis of children under 2 years, one from influenza and one from encephalitis lethargica. In the 3 preceding weeks deaths from measles were 6, 9 and 10; deaths from whooping-cough were one, one and 4; deaths from diarrhoea and enteritis of children under 2 years were one, 3 and one, deaths from influenza were 0, one and one, and deaths from encephalitis lethargica, one, 0 and 0.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, one from tuberculous meningitis and 3 from other forms of tuberculosis), as against 16, 26 and 17, from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 9 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

There was one accidental death recorded, that of a child aged 2 years from scalds.

Among deaths of infants under one year old, one was due to whooping-cough, one to convulsions, one to bronchitis, one to broncho-pneumonia, 2 to pneumonia, 2 to diarrhoea and enteritis, one to premature birth, one to congenital malformation, and 3 to congenital debility.

Thirty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 6 were under one month old, and 35 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 110 deaths recorded, 33 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 20th June in 105 large English towns (including London, in which the rate was 8·6) was equal to an average annual death-rate of 9·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·2 per 1,000 persons living, the rate for Glasgow being 11·7, and for Edinburgh 13·5.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE II.—Showing for the week ended, Saturday, 20th June, 1925, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 25. VOL. LXII.] WEEK ENDED SATURDAY, 27TH JUNE, 1925. [PRICE 1½d. NET.

*Oifig um Chláirú Ghenearála,
Baile Átha Cliath,
30adh lá de mhí Meitheamh, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 10·1 and 13·2; Dublin Registration Area, 10·7 and 13·3; Dublin County Borough, 11·0 and 13·4; Cork, 8·2 and 12·9; Limerick, 13·5 and 13·9; and Waterford, 3·8 and 10·0.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·1 per 1,000. One of the 12 deaths from all causes for Cork was from enteric fever, and one of the 2 deaths for Dundalk was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 255—113 boys and 142 girls—and the deaths to 105—50 males and 55 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 10·7 per 1,000 of the population. During the twenty-five weeks ending with Saturday last, the death rate averaged 16·6 and was 4·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-five weeks was 18·2, and during the corresponding periods of the preceding ten years, 22·7.

Included in the 90 deaths appertaining to the Area are 3 from measles, 1 from scarlet fever, 3 from whooping-cough, one from diphtheria, one from dysentery, and 3 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 9, 10 and 5; deaths from scarlet fever were one, one and 0; deaths from whooping-cough were one, 4 and 3; deaths from diphtheria were one, 3 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 3, one and 2. There were no deaths from dysentery in the 3 preceding weeks.

Tuberculous disease caused 15 deaths (13 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from tuberculosis of cervical vertebrae), as against 26, 17 and 15, from all forms of tuberculosis in the three weeks preceding.

Three deaths were caused by cancer, and 12 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 4 from broncho-pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

One accidental death, due to drowning, was registered.

Among deaths of infants under one year old, 2 were due to whooping-cough, one to tuberculosis, 2 to convulsions, 2 to diarrhoea and enteritis, and one to congenital debility.

Twenty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 9 being infants under one year, of whom 2 were under one month old, and 24 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 90 deaths recorded, 36 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 27th June in 105 large English towns (including London, in which the rate was 8·3) was equal to an average annual death-rate of 9·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·5 per 1,000 persons living, the rate for Glasgow being 12·7, and for Edinburgh 10·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 27th June, 1925**, and each of the preceding three weeks, A dash (—) denotes that the disease in question is not notifiable in the District.

Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 26, VOL. LXII.] WEEK ENDED SATURDAY, 4TH JULY, 1925. [PRICE 1½d. NET.

*Oifig um Chláirú Ghenearála,
Baile Átha Cliath,
7adh lá de mhí Iúil, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·1 and 13·6; Dublin Registration Area, 14·5 and 13·5; Dublin County Borough, 14·5 and 13·7; Cork, 13·6 and 12·8; Limerick, 8·1 and 12·2; and Waterford, 22·8 and 14·7.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·1 per 1,000. One of the 4 deaths from all causes for Dundalk was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 236—124 boys and 112 girls—and the deaths to 134—71 males and 63 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·5 per 1,000 of the population. During the twenty-six weeks ending with Saturday last, the death rate averaged 16·5 and was 4·2 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-six weeks was 18·1, and during the corresponding periods of the preceding ten years, 22·4.

Included in the 122 deaths appertaining to the Area are 4 from measles, 5 from whooping-cough, 3 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 10, 5 and 3; deaths from whooping-cough were 4, 3 and 3; deaths from diarrhoea and enteritis of children under 2 years were one, 2 and 3; and deaths from influenza were one, one and 0.

Tuberculous disease caused 12 deaths (10 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from tuberculous adenitis), as against 17, 15 and 15 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer, and 15 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 10 deaths.

No deaths from violence were registered

Among deaths of infants under one year old, one was due to measles, 3 were due to whooping-cough, one to tuberculous meningitis, 4 to convulsions, one to congestion of lungs, 3 to diarrhoea and enteritis, 3 to premature birth and 5 to congenital debility.

Thirty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 22 being infants under one year, of whom 7 were under one month old, and 31 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 122 deaths recorded, 55 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 4th July in 105 large English towns (including London, in which the rate was 9·6) was equal to an average annual death-rate of 9·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·0 per 1,000 persons living, the rate for Glasgow being 12·3, and for Edinburgh 14·2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, [and] diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 4th July, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 10 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 27, VOL. LXII.] WEEK ENDED SATURDAY, 11TH JULY, 1925. [PRICE 1½d. NET.

*Oifig um Chláráí Ghenearála,
Baile Átha Cliath,
14adh lá de mhí Iúil, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 11·9 and 12·6; Dublin Registration Area, 12·3 and 12·7; Dublin County Borough, 12·3 and 12·7; Cork, 12·2 and 12·4; Limerick, 9·5 and 11·2; and Waterford, 11·4 and 12·4.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·1 per 1,000. One of the 3 deaths from all causes for Dundalk was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 249—128 boys and 121 girls—and the deaths to 108—58 males and 50 females.

The deaths registered, omitting the deaths (numbering 5) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·3 per 1,000 of the population. During the twenty-seven weeks ending with Saturday last, the death rate averaged 16·3 and was 4·2 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-seven weeks was 17·9, and during the corresponding periods of the preceding ten years, 22·2.

Included in the 103 deaths appertaining to the Area are 6 from measles, 2 from whooping-cough, 5 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 5, 3 and 4; deaths from whooping-cough were 3, 3 and 5; deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and 3; and deaths from influenza were one, 0 and one.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and 2 from other forms of tuberculosis), as against 15, 15 and 12 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 11 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Two accidental deaths were registered, one (that of a child aged 2½ years) being caused by burns.

Among deaths of infants under one year old, 2 were due to measles, one to whooping-cough, one to specific disease, one to convulsions, 4 to diarrhoea and enteritis, 2 to premature birth, 2 to congenital malformation and 3 to congenital debility.

Thirty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 20 being infants under one year, of whom 7 were under one month old, and 20 deaths were those of persons aged 65 years and upwards, of whom 15 were 70 years of age or over.

Of the 103 deaths recorded, 52 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 11th July in 105 large English towns (including London, in which the rate was 8·7) was equal to an average annual death-rate of 9·4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·1 per 1,000 persons living, the rate for Glasgow being 11·6, and for Edinburgh 10·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 11th July, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTs, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

(*a*) See note at foot of fourth page. (*b*) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1924. The population given for Glasgow and Edinburgh is that estimated to the middle of 1925. (*c*) See note (†) at foot of first page. (*d*) Observations at Ordnance Survey Office, Phoenix Park. (*e*) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (*f*) Botanic Gardens, Kew. (*g*) Involving one death from cerebro-spinal meningitis. (*h*) Including one death from cerebro-spinal meningitis.

TABLE II.—Showing for the week ended, Saturday, 11th July, 1923, the number of Deaths or residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual rate per 1,000 of the population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 14 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·5 and 12·2; Dublin Registration Area, 13·8 and 12·8; Dublin County Borough, 14·6 and 13·1; Cork, 11·6 and 11·4; Limerick, 6·8 and 9·5; and Waterford, 9·5 and 11·9.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 211—103 boys and 108 girls—and the deaths to 133—70 males and 63 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·8 per 1,000 of the population. During the twenty-eight weeks ending with Saturday last, the death rate averaged 16·2 and was 4·2 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-eight weeks was 17·9, and during the corresponding periods of the preceding ten years, 22·1.

Included in the 116 deaths appertaining to the Area are 7 from measles, one from whooping-cough, one from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and one from encephalitis lethargica. In the 3 preceding weeks deaths from measles were 3, 4 and 6; deaths from whooping-cough were 3, 5 and 2; deaths from diphtheria were one, 0 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 3, 3 and 5. There were no deaths from encephalitis lethargica in the three preceding weeks.

Tuberculous disease caused 4 deaths (all of which were from pulmonary tuberculosis), as against 15, 12 and 15 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 16 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Three accidental deaths were registered, one (that of a child aged 2 years 4 months) being caused by burns.

Among deaths of infants under one year old, one was due to measles, one to meningitis, one to convulsions, one to broncho pneumonia, 2 to diarrhoea and enteritis, 6 to premature birth, 2 to congenital malformation and 4 to congenital débility.

Forty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 24 being infants under one year, of whom 14 were under one month old, and 28 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 116 deaths recorded, 40 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 18th July in 105 large English towns (including London, in which the rate was 9·4) was equal to an average annual death-rate of 9·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·0 per 1,000 persons living, the rate for Glasgow being 10·0, and for Edinburgh 12·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

DEATHS,

* See note at foot of fourth page.

† See note (†) at foot of first page.

The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1911.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 18th July, 1925**, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

* Exclusive of 13 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2, and Killiney Registrars' Districts of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·9 and 13·4; Dublin Registration Area, 15·2 and 14·0; Dublin County Borough, 16·0 and 14·4; Cork, 15·6 and 13·3; Limerick, 16·2 and 10·2; and Waterford, 9·5 and 13·3.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·4 per 1,000. Among the 23 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years, and one of the 12 deaths from all causes for Limerick was from typhus.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 225—114 boys and 111 girls—and the deaths to 147—75 males and 72 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·2 per 1,000 of the population. During the twenty-nine weeks ending with Saturday last, the death rate averaged 16·2 and was 4·0 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the twenty-nine weeks was 17·9, and during the corresponding periods of the preceding ten years, 21·9.

Included in the 128 deaths appertaining to the Area are one from enteric fever, 5 from measles, one from scarlet fever, 5 from whooping-cough, 2 from diphtheria, and 12 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 4, 6 and 7; deaths from whooping-cough were 5, 2 and one; deaths from diphtheria were 0, 0 and one; and deaths from diarrhoea and enteritis of children under 2 years were 3, 5 and 3. There were no deaths from enteric fever or from scarlet fever in the three preceding weeks.

Tuberculous disease caused 10 deaths (7 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from tuberculous peritonitis), as against 12, 15 and 4 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 16 by diseases of the heart.

There were 13 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar pneumonia and 5 from pneumonia (not otherwise defined). Bronchitis caused 4 deaths.

One accidental death was registered.

Among deaths of infants under one year old, 3 were due to whooping-cough, one to diphtheria, one to tuberculosis, one to meningitis, 2 to convulsions, one to broncho-pneumonia, one to lobar pneumonia, one to pneumonia, 9 to diarrhoea and enteritis, 5 to premature birth, 3 to congenital malformation and 2 to congenital debility.

Fifty-eight of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 33 being infants under one year, of whom 7 were under one month old, and 26 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 128 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 25th July in 105 large English towns (including London, in which the rate was 8·2) was equal to an average annual death-rate of 9·4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12·1 per 1,000 persons living, the rate for Glasgow being 13·0, and for Edinburgh 10·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 25th July, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) Including one case of encephalitis lethargica. (b) Pyrexia.

TABLE IV.—Showing the NUMBER of CASES of the undermentioned DISEASES treated in Dublin Hospitals during the week ended **Saturday, 25th July, 1925**, with the number under treatment at the close of each of the last four weeks.

| DISEASES | No. of Cases in Hospital at close of week ended | | | Week ended 25th July | | | |
|-------------------|--|---------|---------|----------------------|------------------|-------|--|
| | July 4 | July 11 | July 18 | No. admitted. | Dis- charged. | Died. | No. under treatment at close of week. |
| Enteric Fever, | 2 | 4 | 6 | 1 | 2 | 1 | 4 |
| Typhus, | . | . | . | . | . | . | . |
| Small-pox, | — | . | . | . | . | . | . |
| Measles, | 44 | 32 | 34 | 15 | 11 | 2 | 36 |
| Scarlet Fever, .. | 64 | 64 | 61 | 6 | 8 | . | 59* |
| Diphtheria, | 30 | 30 | 31 | 10 | 8 | 1 | 32 |
| Pneumonia, | 19 | 10 | 13 | 5 | 4 | . | 14 |

* Exclusive of 10 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE ;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 30, VOL. LXII.] WEEK ENDED SATURDAY, 1ST AUGUST, 1925. [PRICE 1½d. NET.

*Oifig um Chlárá Ghinearálta,
Baile Átha Cliath,
4adh lá de mhí Lughnasa, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·2 and 12·9 ; Dublin Registration Area, 11·8 and 13·3 ; Dublin County Borough, 13·2 and 14·0 ; Cork, 14·3 and 13·4 ; Limerick, 9·5 and 10·5 ; and Waterford, 15·2 and 11·4.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·0 per 1,000. Among the 21 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years, and one of the 4 deaths from all causes for Dundalk was from whooping cough

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 177—86 boys and 91 girls—and the deaths to 109—53 males and 56 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11·8 per 1,000 of the population. During the thirty weeks ending with Saturday last, the death rate averaged 16·1 and was 3·9 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty weeks was 17·7, and during the corresponding periods of the preceding ten years, 21·6.

Included in the 99 deaths appertaining to the Area are 3 from measles, one from diphtheria, and 18 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 6, 7 and 5 ; deaths from diphtheria were 0, one and 2 ; and deaths from diarrhoea and enteritis of children under 2 years were 5, 3 and 12.

Tuberculous disease caused 11 deaths (8 of which were from pulmonary tuberculosis and 3 from other forms of tuberculous disease), as against 15, 4 and 10 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 12 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 5 from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 3 deaths.

One death by suicide was registered.

Among deaths of infants under one year old, one was due to erysipelas, one to meningitis, 2 to convulsions, one to bronchitis, one to broncho-pneumonia, 15 to diarrhoea and enteritis, 2 to premature birth and 3 to congenital debility.

Forty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 27 being infants under one year, of whom 5 were under one month old, and 23 deaths were those of persons aged 65 years and upwards, of whom 12 were 70 years of age or over.

Of the 99 deaths recorded, 34 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 1st August in 105 large English towns (including London, in which the rate was 9·1) was equal to an average annual death-rate of 9·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·0 per 1,000 persons living, the rate for Glasgow being 11·8, and for Edinburgh 9·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 1st August, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1924. The population given for Glasgow and Edinburgh is that estimated to the middle of 1925. (c) See note (+) at foot of first page. (d) Observations at Ordnance Survey Office Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin (g) Markree. (h) Including one death from cerebro-spinal meningitis.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 1st August, 1925**, and each of the preceding three weeks, A dash (—) denotes that the disease in question is not notifiable in the District.

* Exclusive of 14 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

*Oifig um Chlárú Ghenearála,
Baile Átha Cliath,
11adh lá de mhí Lughnasa, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 11·1 and 12·7; Dublin Registration Area, 10·1 and 12·7; Dublin County Borough, 11·0 and 13·7; Cork, 12·2 and 13·4; Limerick, 17·6 and 12·5; and Waterford, 13·3 and 11·9.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·5 per 1,000. Among the 18 deaths from all causes for Cork were 4 from diarrhoea and enteritis of children under 2 years, one of the 2 deaths from all causes for Dundalk was from whooping cough, and one of the 2 deaths from all causes for Sligo was from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 247—121 boys and 126 girls—and the deaths to 95—50 males and 45 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 10·1 per 1,000 of the population. During the thirty-one weeks ending with Saturday last, the death rate averaged 15·9 and was 3·9 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-one weeks was 17·5, and during the corresponding periods of the preceding ten years, 21·4.

Included in the 85 deaths appertaining to the Area are 2 from measles, one from scarlet fever, and 9 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 7, 5 and 3; deaths from scarlet fever were 0, one and 0; and deaths from diarrhoea and enteritis of children under 2 years were 3, 12 and 18.

Tuberculous disease caused 12 deaths (8 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from abdominal tuberculosis), as against 4, 10 and 11 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 8 by diseases of the heart.

There were 2 deaths from pneumonia, comprising one from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Two deaths by suicide were registered, and there was one accidental death.

Among deaths of infants under one year old, 2 were due to meningitis, 3 to convulsions, 2 to bronchitis, 8 to diarrhoea and enteritis, 4 to premature birth and 5 to congenital debility.

Thirty-three of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 25 being infants under one year, of whom 5 were under one month old, and 15 deaths were those of persons aged 65 years and upwards, of whom 10 were 70 years of age or over.

Of the 85 deaths recorded, 36 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 8th August in 105 large English towns (including London, in which the rate was 8·7) was equal to an average annual death-rate of 8·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·4 per 1,000 persons living, the rate for Glasgow being 11·2, and for Edinburgh 11·5.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 32, Vol. LXII.] WEEK ENDED SATURDAY, 15TH AUGUST, 1925. [PRICE 1½d. NET.]

*Oifig um Chláirí Ghinearálta,
Baile Átha Cliath,
18adh lá de mhí Lughnasa, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·5 and 12·7; Dublin Registration Area, 13·8 and 12·7; Dublin County Borough, 14·6 and 13·7; Cork, 11·6 and 13·4; Limerick, 9·5 and 13·2; and Waterford, 9·5 and 11·9.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·4 per 1,000. Among the 17 deaths from all causes for Cork were one from diphtheria and 2 from diarrhoea and enteritis of children under 2 years, of the 7 deaths from all causes for Limerick one was from influenza, and one from diarrhoea and enteritis of a child under 2 years; and 2 of the 5 deaths from all causes for Waterford was from diarrhoea and enteritis of children under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 227—102 boys and 125 girls—and the deaths to 127—61 males and 66 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·8 per 1,000 of the population. During the thirty-two weeks ending with Saturday last, the death rate averaged 15·8 and was 3·8 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-two weeks was 17·4, and during the corresponding periods of the preceding ten years, 21·2.

Included in the 116 deaths appertaining to the Area are 4 from measles, 2 from whooping cough and 19 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 5, 3 and 2; deaths from whooping-cough were 5, 0 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 12, 18 and 9.

Tuberculous disease caused 14 deaths (13 of which were from pulmonary tuberculosis, and one from tuberculous meningitis), as against 10, 11 and 12 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer, and 8 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar pneumonia and 3 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

There were two accidental deaths, one that of a child aged 2 years and 3 months being caused by scalds.

Among deaths of infants under one year old, one was due to measles, 2 to whooping-cough, 2 to convulsions, one to broncho-pneumonia, one to lobar pneumonia, 2 to pneumonia (not otherwise defined), 18 to diarrhoea and enteritis, 2 to premature birth and 9 to congenital debility.

Fifty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 39 being infants under one year, of whom 6 were under one month old, and 22 deaths were those of persons aged 65 years and upwards, of whom 13 were 70 years of age or over.

Of the 116 deaths recorded, 48 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 15th August in 105 large English towns (including London, in which the rate was 8·7) was equal to an average annual death-rate of 9·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·6 per 1,000 persons living, the rate for Glasgow being 11·9, and for Edinburgh 11·7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 16 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 33. VOL. LXII.] WEEK ENDED SATURDAY, 22ND AUGUST, 1925. [PRICE 1½d. NET.

*Oifig um Chláru Ghenearála,
Baile Átha Cliath,
25adh lá de mhí Lughnasa, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts (a), 13·7 and 12·4; Dublin Registration Area, 14·9 and 12·7; Dublin County Borough, 15·5 and 13·6; Cork, 14·3 and 13·1; Limerick, 5·4 and 10·5; and Waterford, 9·5 and 11·9.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·4 per 1,000. Among the 21 deaths from all causes for Cork were 3 from diarrhoea and enteritis of children under 2 years, of the 4 deaths from all causes for Dundalk one was from whooping-cough, and one of 2 deaths recorded for Tralee was from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 181—101 boys and 80 girls—and the deaths to 140—67 males and 73 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·9 per 1,000 of the population. During the thirty-three weeks ending with Saturday last, the death rate averaged 15·8 and was 3·6 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-three weeks was 17·4, and during the corresponding periods of the preceding ten years, 21·0.

Included in the 125 deaths appertaining to the Area are 5 from measles; one from whooping cough, 19 from diarrhoea and enteritis of children under 2 years and one from influenza. In the 3 preceding weeks deaths from measles were 3, 2 and 4; deaths from whooping-cough were 0, 0 and 2; and deaths from diarrhoea and enteritis of children under 2 years were 18, 9 and 19. There were no deaths from influenza in the 3 preceding weeks.

Tuberculous disease caused 19 deaths (17 of which were from pulmonary tuberculosis, and 2 from tuberculous meningitis), as against 11, 12 and 14 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 9 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 2 from broncho-pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused one death.

There were 3 accidental deaths, one (that of a child aged 2 years and 2 months) being caused by burns and 2 by drowning.

Among deaths of infants under one year old, one was due to measles, one to whooping-cough, 2 to meningitis, 3 to convulsions, one to broncho-pneumonia, one to congestion of lungs, 16 to diarrhoea and enteritis, 4 to premature birth, 2 to congenital malformations and 8 to congenital debility.

Fifty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 39 being infants under one year, of whom 8 were under one month old, and 17 deaths were those of persons aged 65 years and upwards, of whom 13 were 70 years of age or over.

Of the 125 deaths recorded, 47 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 22nd August in 105 large English towns (including London, in which the rate was 9·1) was equal to an average annual death-rate of 9·4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·2 per 1,000 persons living, the rate for Glasgow being 11·4, and for Edinburgh 12·6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

(a) See Note (i) at foot of Table I.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 22nd August, 1925**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 12 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

ceád lá de mhí Meadhon Foghmhair, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts 13·0 and 12·6; Dublin Registration Area, 13·8 and 13·2; Dublin County Borough, 14·6 and 13·9; Cork, 12·9 and 12·8; Limerick, 10·8 and 10·8; and Waterford, 11·4 and 10·9.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·3 per 1,000. One of the 19 deaths from all causes for Cork was from scarlet fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 355—177 boys and 178 girls—and the deaths to 131—65 males and 66 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·8 per 1,000 of the population. During the thirty-four weeks ending with Saturday last, the death rate averaged 15·7 and was 3·6 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-four weeks was 17·3, and during the corresponding periods of the preceding ten years, 20·9.

Included in the 116 deaths appertaining to the Area are 3 from measles, 2 from whooping cough, 21 from diarrhoea and enteritis of children under 2 years and one from influenza. In the 3 preceding weeks deaths from measles were 2, 4 and 5; deaths from whooping-cough were 0, 2 and one; deaths from diarrhoea and enteritis of children under 2 years were 9, 19 and 19; and deaths from influenza were 0, 0 and one.

Tuberculous disease caused 5 deaths (all of which were from pulmonary tuberculosis), as against 12, 14 and 19 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 15 by diseases of the heart.

There were 5 deaths from pneumonia, comprising 2 from broncho-pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

One death due to poisoning was registered.

Among deaths of infants under one year old, one was due to whooping-cough, one to convulsions, one to bronchitis, 20 to diarrhoea and enteritis, 6 to premature birth, and 7 to congenital debility.

Forty-nine of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 37 being infants under one year, of whom 10 were under one month old, and 29 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 116 deaths recorded, 47 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 29th August in 105 large English towns (including London, in which the rate was 8·9) was equal to an average annual death-rate of 9·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·4 per 1,000 persons living, the rate for Glasgow being 12·0, and for Edinburgh 11·7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

DEATH,

[illegible]

* See note at foot of fourth page.

The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1911.

See note (†) at foot of first page.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 29th August, 1925**, and each of the preceding three weeks, A dash (—) denotes that the disease in question is not notifiable in the District.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 35, VOL. LXII.] WEEK ENDED SATURDAY, 5TH SEPT., 1925. [PRICE 1½d. NET.

*Oifig um Chlárá, Ghenearála,
Baile Átha Cliath,
8adh lá de mhí Meadhon Foghmhair, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts 15·6 and 13·7; Dublin Registration Area, 15·7 and 14·6; Dublin County Borough, 16·2 and 15·2; Cork, 19·0 and 14·5; Limerick, 13·5 and 9·8; and Waterford, 15·2 and 11·4.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·5 per 1,000. Of the 28 deaths from all causes for Cork 5 were from diarrhoea and enteritis of children under 2 years, and the 2 deaths recorded for Tralee were from the same cause.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 196—98 boys and 98 girls—and the deaths to 152—79 males and 73 females.

The deaths registered, omitting the deaths (numbering 20) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·7 per 1,000 of the population. During the thirty-five weeks ending with Saturday last, the death rate averaged 15·7 and was 3·5 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-five weeks was 17·4, and during the corresponding periods of the preceding ten years, 20·8.

Included in the 132 deaths appertaining to the Area are 4 from measles, one from diphtheria, one from dysentery and 19 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 4, 5 and 3; and deaths from diarrhoea and enteritis of children under 2 years were 19, 19 and 21. There were no deaths registered from diphtheria or dysentery in the three preceding weeks.

Tuberculous disease caused 13 deaths (8 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and 3 from other forms of tuberculosis), as against 14, 19 and 5 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 16 by diseases of the heart.

There were 11 deaths from pneumonia, comprising 5 from broncho-pneumonia, 2 from lobar-pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

There were 4 deaths attributed to accident (one that of a child aged 3 years) being caused by burns and one was due to a motor accident.

Among deaths of infants under one year old, 2 were due to measles, one to abdominal tuberculosis, one to meningitis, 2 to broncho-pneumonia, 17 to diarrhoea and enteritis, one to premature birth, and 5 to congenital debility.

Forty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 31 being infants under one year, of whom 3 were under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 132 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 5th September in 105 large English towns (including London, in which the rate was 8·3) was equal to an average annual death-rate of 9·1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10·5 per 1,000 persons living, the rate for Glasgow being 11·0, and for Edinburgh 10·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 5th September, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs ; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week ; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1924. The population given for Glasgow and Edinburgh is that estimated to the middle of 1925. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including one death from cerebro-spinal meningitis.

annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents with n these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
15adh lá de mhí Meadhon Foghmhair, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts 13·4 and 13·9; Dublin Registration Area, 13·8 and 14·6; Dublin County Borough, 13·5 and 15·0; Cork, 16·3 and 15·6; Limerick, 8·1 and 9·5; and Waterford, 7·6 and 10·9.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·9 per 1,000. Of the 24 deaths from all causes for Cork 3 were from diarrhoea and enteritis of children under 2 years, and one of the three deaths from all causes for Tralee was from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 179—83 boys and 96 girls—and the deaths to 133—59 males and 74 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·8 per 1,000 of the population. During the thirty-six weeks ending with Saturday last, the death rate averaged 15·7 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-six weeks was 17·3, and during the corresponding periods of the preceding ten years, 20·7.

Included in the 116 deaths appertaining to the Area are one from scarlet fever, one from whooping-cough, 17 from diarrhoea and enteritis of children under 2 years, and one from encephalitis lethargica. In the 3 preceding weeks deaths from whooping-cough were one, 2 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 19, 21 and 17. There were no deaths from scarlet fever or encephalitis lethargica registered in the 3 preceding weeks.

Tuberculous disease caused 17 deaths (16 of which were from pulmonary tuberculosis, and one from tuberculous peritonitis), as against 19, 5 and 13 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 11 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 3 from broncho-pneumonia, 2 from lobar-pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Five accidental deaths were registered, one (that of a child aged 3 years) being caused by scalds.

Among deaths of infants under one year old, one was due to whooping-cough, 2 were due to convulsions, one to broncho-pneumonia, 2 to pneumonia, 13 to diarrhoea and enteritis, 5 to premature birth, and 4 to congenital debility.

Forty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 30 being infants under one year, of whom 6 were under one month old, and 16 deaths were those of persons aged 65 years and upwards, of whom 14 were 70 years of age or over.

Of the 116 deaths recorded, 45 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 12th September in 105 large English towns (including London, in which the rate was 9·6) was equal to an average annual death-rate of 9·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·3 per 1,000 persons living, the rate for Glasgow being 11·9, and for Edinburgh 11·7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 12th September, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow,

* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 37, VOL. LXII.] WEEK ENDED SATURDAY, 19TH SEPT., 1925. [PRICE 1½d. NET.

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,*

22adh lá de mhí Meadhon Fómhair, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts 12·8 and 13·7; Dublin Registration Area, 13·2 and 14·1; Dublin County Borough, 15·2 and 14·9; Cork, 12·9 and 15·3; Limerick, 9·5 and 10·5; and Waterford, 11·4 and 11·4.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 2·1 per 1,000. Of the 19 deaths from all causes for Cork 3 were from diarrhoea and enteritis of children under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 255—138 boys and 117 girls—and the deaths to 124—59 males and 65 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·2 per 1,000 of the population. During the thirty-seven weeks ending with Saturday last, the death rate averaged 15·6 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-seven weeks was 17·2, and during the corresponding periods of the preceding ten years, 20·6.

Included in the 111 deaths appertaining to the Area are one from whooping-cough, and 19 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from whooping-cough were 2, 0 and one; and deaths from diarrhoea and enteritis of children under 2 years were 21, 17 and 17.

Tuberculous disease caused 10 deaths (7 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 5, 13 and 17 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 11 by diseases of the heart.

There were 6 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar-pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 6 deaths.

Three accidental deaths were registered, one of which was caused by drowning and one by a tramcar.

Among deaths of infants under one year old, one was due to whooping-cough, one to general tuberculosis, one to meningitis, 2 were due to convulsions, one to bronchitis, one to broncho-pneumonia, one to pneumonia, 15 to diarrhoea and enteritis, 7 to premature birth, 2 to congenital malformation, and 5 to congenital debility.

Forty-six of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 38 being infants under one year, of whom 12 were under one month old, and 19 deaths were those of persons aged 65 years and upwards, of whom 15 were 70 years of age or over.

Of the 111 deaths recorded, 43 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 19th September in 105 large English towns (including London, in which the rate was 9·6) was equal to an average annual death-rate of 10·3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·8 per 1,000 persons living, the rate for Glasgow being 12·1, and for Edinburgh 12·2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE,

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 38, Vol. LXII.] WEEK ENDED SATURDAY, 26TH SEPT., 1925. [PRICE 1½d. NET.

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
29adh lá de mhí Meadhon Foghmhair, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts 11·4 and 13·3; Dublin Registration Area, 13·0 and 13·9; Dublin County Borough, 12·9 and 14·5; Cork, 6·1 and 13·6; Limerick, 6·8 and 9·5; and Waterford, 7·6 and 10·5.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. Among the 4 deaths from all causes for Sligo were one from measles and one from gastro-enteritis of a child under 2 years, and 2 of the 5 deaths for Tralee were from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 222—128 boys and 94 girls—and the deaths to 118—54 males and 64 females.

The deaths registered, omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·0 per 1,000 of the population. During the thirty-eight weeks ending with Saturday last, the death rate averaged 15·5 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-eight weeks was 17·2, and during the corresponding periods of the preceding ten years, 20·5.

Included in the 109 deaths appertaining to the Area are one from measles, one from whooping-cough, one from diphtheria, and 6 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from measles were 4, 0 and 0; deaths from whooping-cough were 0, one and one; deaths from diphtheria were one, 0 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 17, 17 and 19.

Tuberculous disease caused 16 deaths (9 of which were from pulmonary tuberculosis, 6 from tuberculous meningitis, and one from tuberculous enteritis), as against 13, 17 and 10 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 11 by diseases of the heart.

There were 3 deaths from pneumonia, comprising 2 from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 5 deaths.

One accidental death was registered.

Among deaths of infants under one year old, one was due to measles, one to whooping-cough, one to tuberculous meningitis, 2 were due to convulsions, 5 to diarrhoea and enteritis, 5 to premature birth, and 6 to congenital debility.

Thirty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 23 being infants under one year, of whom 9 were under one month old, and 24 deaths were those of persons aged 65 years and upwards, of whom 16 were 70 years of age or over.

Of the 109 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 26th September in 105 large English towns (including London, in which the rate was 10·2) was equal to an average annual death-rate of 10·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·7 per 1,000 persons living, the rate for Glasgow being 12·2, and for Edinburgh 11·6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 26th September, 1925**, and each of the preceding three weeks, A dash (—) denotes that the disease in question is not notifiable in the District.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 39. VOL. LXII.] WEEK ENDED SATURDAY, 3RD OCTOBER, 1925. [PRICE 1½d. NET.

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
6adh lá de mhí Deireadh Fómhair, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 15·2 and 13·2; Dublin Registration Area, 13·3 and 14·4; Dublin County Borough, 14·0 and 13·9; Cork, 19·0 and 13·6; Limerick, 28·4 and 13·2; and Waterford, 34·2 and 15·2.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 28 deaths from all causes for Cork were 3 from diarrhoea and enteritis of children under 2 years, and of the 18 deaths for Waterford one was from diphtheria and 2 were from diarrhoea and enteritis of children under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 254—122 boys and 132 girls—and the deaths to 132—72 males and 60 females.

The deaths registered, omitting the deaths (numbering 20) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·3 per 1,000 of the population. During the thirty-nine weeks ending with Saturday last the death rate averaged 15·5 and was 3·3 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the thirty-nine weeks was 17·1, and during the corresponding periods of the preceding ten years, 20·4.

Included in the 112 deaths appertaining to the Area are 2 from scarlet fever and 4 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from scarlet fever were one, 0 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 17, 19 and 6.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 17, 10 and 16 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 12 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 5 from broncho-pneumonia, 3 from lobar pneumonia and 2 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

Five accidental deaths were registered, 2 being caused by drowning and one by a motor vehicle.

Among deaths of infants under one year old, one was due to meningitis, 2 were due to lobar-pneumonia, 3 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation and 7 to congenital debility.

Twenty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 18 being infants under one year, of whom 9 were under one month old, and 31 deaths were those of persons aged 65 years and upwards, of whom 22 were 70 years of age or over.

Of the 112 deaths recorded, 51 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 3rd October in 105 large English towns (including London, in which the rate was 10·0) was equal to an average annual death-rate of 10·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·9 per 1,000 persons living, the rate for Glasgow being 11·8, and for Edinburgh 13·4.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

annual rate per 1,000 of the population of the respective districts represented in the table, and by the deaths from the principal epidemic diseases; with the mortality from some of the principal causes; also the deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 22 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 40, VOL. LXII.] WEEK ENDED SATURDAY, 10TH OCTOBER, 1925. [PRICE 1½d. NET.

*Oifig um Chlárá Ghenearála,
Baile Átha Cliath,
13adh lá de mhí Deireadh Foghmhair, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 11·4 and 12·7; Dublin Registration Area, 11·1 and 12·7; Dublin County Borough, 12·6 and 13·7; Cork, 17·0 and 13·8; Limerick, 9·5 and 13·6; and Waterford, 9·5 and 15·7.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·1 per 1,000. Among the 25 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years, and the 2 deaths recorded for Sligo were from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 224—118 boys and 106 girls—and the deaths to 102—66 males and 36 females.

The deaths registered, omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11·1 per 1,000 of the population. During the forty weeks ending with Saturday last the death rate averaged 15·4 and was 3·3 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty weeks was 17·0, and during the corresponding periods of the preceding ten years, 20·3.

Included in the 93 deaths appertaining to the Area are one from enteric fever, 2 from measles, 3 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years and 2 from influenza. In the 3 preceding weeks deaths from measles were 0, one and 0; deaths from diphtheria were 0, one and 0; and deaths from diarrhoea and enteritis of children under 2 years were 19, 6 and 4. There were no deaths from enteric fever or from influenza in the 3 preceding weeks.

There was one death from encephalitis lethargica.

Tuberculous disease caused 10 deaths (5 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 4 from other forms of tuberculous disease), as against 10, 16 and 13 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 11 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, and 4 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

Two accidental deaths were registered, one (that of a child aged 2 years) being caused by burns and one by drowning.

Among deaths of infants under one year old, one was due to syphilis, 2 were due to convulsions, one to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, and 5 to congenital debility.

Twenty-two of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 12 being infants under one year, of whom 7 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 93 deaths recorded, 40 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 10th October in 105 large English towns (including London, in which the rate was 10·0) was equal to an average annual death-rate of 10·0 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·8 per 1,000 persons living, the rate for Glasgow being 11·2, and for Edinburgh 15·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 10th October, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHS or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 16 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents with in these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 41. VOL. LXII.] WEEK ENDED SATURDAY, 17TH OCTOBER, 1925. [PRICE 1½d. NET.

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,*

20adh lá de mhí Deireadh Foghmhair, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·5 and 12·6; Dublin Registration Area, 13·8 and 12·8; Dublin County Borough, 14·3 and 13·5; Cork, 9·5 and 12·9; Limerick, 14·7 and 14·9; and Waterford, 13·3 and 16·2.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 14 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years, and one of the 5 deaths recorded for Sligo was from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 195—109 boys and 86 girls—and the deaths to 133—64 males and 69 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·8 per 1,000 of the population. During the forty-one weeks ending with Saturday last the death rate averaged 15·3 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-one weeks was 17·0, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 116 deaths appertaining to the Area are one from enteric fever, 2 from measles, one from scarlet fever, 3 from whooping-cough and 5 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from enteric fever were 0, 0 and one; deaths from measles were one, 0 and 2; deaths from scarlet fever were 0, 2 and 0; deaths from whooping-cough were one, 0 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 6, 4 and 3.

Tuberculous disease caused 10 deaths (9 of which were from pulmonary tuberculosis, and one from intestinal tuberculosis), as against 16, 13 and 10 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 11 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 5 deaths.

Four accidental deaths were registered, one (that of a child aged 1½ years) being caused by burns and 2 by motor vehicles. There was also one death by suicide.

Among deaths of infants under one year old, one was due to whooping-cough, one to broncho-pneumonia, 5 were due to diarrhoea and enteritis, 3 to premature birth and 2 to congenital debility.

Twenty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 7 were under one month old, and 35 deaths were those of persons aged 65 years and upwards, of whom 29 were 70 years of age or over.

Of the 116 deaths recorded, 57 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 17th October in 105 large English towns (including London, in which the rate was 10·7) was equal to an average annual death-rate of 10·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11·7 per 1,000 persons living, the rate for Glasgow being 11·8, and for Edinburgh 12·0.

* See note at foot of fourth page.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 42. VOL. LXII.] WEEK ENDED SATURDAY, 24TH OCTOBER, 1925. [PRICE 1½d. NET.

*Oifig um Chláirú Ghenearála,
Baile Átha Cliath,*

27adh lá de mhí Deireadh Fómhair, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 13·2 and 13·1; Dublin Registration Area, 13·2 and 12·9; Dublin County Borough, 12·7 and 13·4; Cork, 13·6 and 14·8; Limerick, 10·8 and 15·9; and Waterford, 7·6 and 16·2.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 20 deaths from all causes for Cork were one from enteric fever, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years, and one of the 7 deaths recorded for Sligo was from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 200—105 boys and 95 girls—and the deaths to 124—69 males and 55 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13·2 per 1,000 of the population. During the forty-two weeks ending with Saturday last the death rate averaged 15·3 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-two weeks was 16·9, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 111 deaths appertaining to the Area are one from enteric fever, 2 from measles, one from scarlet fever, 6 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from enteric fever were 0, one and one; deaths from measles were 0, 2 and 2; deaths from scarlet fever were 2, 0 and one; deaths from diarrhoea and enteritis of children under 2 years were 4, 3 and 5; and deaths from influenza were 0, 2 and 0.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculosis), as against 13, 10 and 10 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 12 by diseases of the heart.

There were 6 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 8 deaths.

Three accidental deaths were registered, one of which was caused by drowning.

Among deaths of infants under one year old, 4 were due to convulsions, one to broncho-pneumonia, 6 to diarrhoea and enteritis, 3 to premature birth, 2 to congenital malformation, and 3 to congenital debility.

Thirty of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 12 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 20 were 70 years of age or over.

Of the 111 deaths recorded, 51 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 24th October in 105 large English towns (including London, in which the rate was 11·4) was equal to an average annual death-rate of 11·2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·7 per 1,000 persons living, the rate for Glasgow being 14·1, and for Edinburgh 14·3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

DEATHS,

* See note at foot of fourth page.

† See note (†) at foot of first page.

† The populations given for the Co. Borough of Cork and its component parts are those according to the Census of 1911.

TABLE III.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the undermentioned areas during the week ended **Saturday, 24th October, 1925**, and each of the preceding three weeks, A dash (—) denotes that the disease in question is not notifiable in the District.

No. 43, VOL. LXII.] WEEK ENDED SATURDAY, 31ST OCTOBER, 1925. [PRICE 1½d. NET.

*Oifig um Chláirú Ghenearála,
Baile Átha Cliath,
3adh lá de mhí na Samhna, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·6 and 12·4; Dublin Registration Area, 12·0 and 12·5; Dublin County Borough, 12·4 and 13·0; Cork, 12·9 and 13·3; Limerick, 17·6 and 13·2; and Waterford, 0·0 and 7·6.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·1 per 1,000. Among the 13 deaths from all causes for Limerick were one from enteric fever and one from diphtheria, and one of the 7 deaths recorded for Sligo was from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 198—106 boys and 92 girls—and the deaths to 117—61 males and 56 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·0 per 1,000 of the population. During the forty-three weeks ending with Saturday last the death rate averaged 15·2 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-three weeks was 16·8, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 101 deaths appertaining to the Area are one from enteric fever, 8 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from enteric fever were one, one and one; deaths from diarrhoea and enteritis of children under 2 years were 3, 5 and 6; and deaths from influenza were 2, 0 and one.

One death from encephalitis lethargica was registered.

Tuberculous disease caused 12 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculosis), as against 10, 10 and 15 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 13 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 4 from broncho-pneumonia, 3 from lobar pneumonia, and 2 from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

One accidental death (that of a child aged one year), caused by burns, was registered.

Among deaths of infants under one year old, one was due to tabes mesenterica, one to syphilis, 2 were due to convulsions, one to bronchitis, 2 to broncho-pneumonia, one to lobar pneumonia, 5 to diarrhoea and enteritis, one to premature birth, and one to congenital debility.

Twenty-five of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 7 were under one month old, and 33 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 101 deaths recorded, 45 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 31st October in 105 large English towns (including London, in which the rate was 10·5) was equal to an average annual death-rate of 10·6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·0 per 1,000 persons living, the rate for Glasgow being 15·4, and for Edinburgh 12·1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended, **Saturday, 31st October, 1925**, the number of Deaths of Residents of the several Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents with n these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·4 and 12·7; Dublin Registration Area, 11·8 and 12·7; Dublin County Borough, 12·6 and 13·0; Cork, 9·5 and 11·4; Limerick, 17·6 and 15·2; and Waterford, 9·5 and 7·6.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·2 per 1,000. Among the 13 deaths from all causes for Limerick was one from enteric fever; included in the 5 deaths for Waterford were 2 from diarrhoea and enteritis of children under 2 years, and 2 of the 6 deaths recorded for Sligo were from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 256—125 boys and 131 girls—and the deaths to 109—57 males and 52 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11·8 per 1,000 of the population. During the forty-four weeks ending with Saturday last the death rate averaged 15·1 and was 3·6 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-four weeks was 16·8, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 99 deaths appertaining to the Area are one from enteric fever, 2 from measles, one from scarlet fever, 6 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from enteric fever were one, one and one; deaths from measles were 2, 2 and 0; deaths from scarlet fever were one, one and 0; deaths from diarrhoea and enteritis of children under 2 years were 5, 6 and 8; and deaths from influenza were 0, one and one.

Tuberculous disease caused 13 deaths (11 of which were from pulmonary tuberculosis, and 2 from tuberculous meningitis), as against 10, 15 and 12 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 7 by diseases of the heart.

There were 3 deaths from pneumonia, comprising 2 from broncho-pneumonia, and one from pneumonia (not otherwise defined). Bronchitis caused 7 deaths.

Four accidental deaths were registered, one of which (that of a child aged one year 3 months), was caused by burns.

Among deaths of infants under one year old, one was due to meningitis, 4 to diarrhoea and enteritis, 2 to premature birth, and 3 to congenital debility.

Twenty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 13 being infants under one year, of whom 5 were under one month old, and 31 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 99 deaths recorded, 42 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 7th November in 105 large English towns (including London, in which the rate was 10·7) was equal to an average annual death-rate of 10·5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13·1 per 1,000 persons living, the rate for Glasgow being 14·6, and for Edinburgh 12·2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended, Saturday, 7th November, 1925, the number of Deaths of Residents of the several Districts comprising the Dublin Registration Area, and the County Borough of Cork, the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

| Scarlet Fever, | 79 | 88 | 89 | 10 | 15 | 1 | 83* |
| Diphtheria, | 34 | 31 | 35 | 9 | 3 | 1 | 40 |
| Pneumonia, | 22 | 21 | 23 | 4 | 6 | 1 | 20 |

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents with n these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·6 and 13·2; Dublin Registration Area, 14·4 and 12·9; Dublin County Borough, 14·9 and 13·2; Cork, 19·0 and 13·8; Limerick, 16·2 and 15·6; and Waterford, 7·6 and 6·2.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·5 per 1,000. Among the 12 deaths from all causes for Limerick were one from influenza and one from gastro-enteritis of a child under 2 years, and one of the 5 deaths recorded for Wexford was from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 187—98 boys and 89 girls—and the deaths to 134—60 males and 74 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14·4 per 1,000 of the population. During the forty-five weeks ending with Saturday last the death rate averaged 15·1 and was 3·6 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-five weeks was 16·7, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 121 deaths appertaining to the Area are 4 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 6, 8 and 6.

Tuberculous disease caused 22 deaths (18 of which were from pulmonary tuberculosis, one from tuberculous peritonitis and 3 from other forms of tuberculosis), as against 15, 12 and 13 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 16 by diseases of the heart.

There were 7 deaths from pneumonia, comprising 4 from broncho-pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 12 deaths.

One accidental death (that of a child aged 1½ years), caused by scalds, was registered.

Among deaths of infants under one year old, one was due to syphilis, one to meningitis, one to convulsions, one to bronchitis, 3 to diarrhoea and enteritis, one to premature birth, and 3 to congenital debility.

Eighteen of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 12 being infants under one year, of whom one was under one month old, and 36 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 121 deaths recorded, 46 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 14th November in 105 large English towns (including London, in which the rate was 10·3) was equal to an average annual death-rate of 10·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14·9 per 1,000 persons living, the rate for Glasgow being 15·7, and for Edinburgh 15·5.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 14th November, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the METEOROLOGY for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1924. The population given for Glasgow and Edinburgh is that estimated to the middle of 1925. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including one death from cerebro-spinal meningitis.

annual rate per 1,000 of the population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents with in these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·4 and 14·0; Dublin Registration Area, 17·1 and 13·8; Dublin County Borough, 17·6 and 14·4; Cork, 20·4 and 15·5; Limerick, 12·2 and 15·9; and Waterford, 11·4 and 7·1.

The deaths from the principal epidemic diseases†, recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·1 per 1,000. Among the 30 deaths from all causes for Cork were 2 from diarrhoea and enteritis of children under 2 years; one of the 4 deaths recorded for Galway was from enteric fever; 2 of the 7 deaths for Dundalk were from diarrhoea and enteritis of children under 2 years; and of the 4 deaths for Sligo one was from measles and one from gastro-enteritis of a child under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 161—87 boys and 74 girls—and the deaths to 163—85 males and 78 females.

The deaths registered, omitting the deaths (numbering 19) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 17·1 per 1,000 of the population. During the forty-six weeks ending with Saturday last the death rate averaged 15·1 and was 3·6 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-six weeks was 16·8, and during the corresponding periods of the preceding ten years, 20·3.

Included in the 144 deaths appertaining to the Area are one from measles, one from whooping-cough, 2 from diphtheria, 3 from diarrhoea and enteritis of children under 2 years and one from influenza. In the 3 preceding weeks deaths from measles were 0, 2 and 0; deaths from diarrhoea and enteritis of children under 2 years were 8, 6 and 4; and deaths from influenza were one, one and 0. There were no deaths from whooping-cough or diphtheria in the three preceding weeks.

Tuberculous disease caused 16 deaths (14 of which were from pulmonary tuberculosis, one from tuberculous meningitis and one from general tuberculosis), as against 12, 13 and 22 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 10 by diseases of the heart.

There were 14 deaths from pneumonia, comprising 11 from broncho-pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 21 deaths.

Two accidental deaths were registered, one being caused by burns and one by drowning. There was also one death by suicide.

Among deaths of infants under one year old, one was due to measles, one to whooping-cough, 2 were due to convulsions, one to bronchitis, one to broncho-pneumonia, 3 to diarrhoea and enteritis, 2 to premature birth, and 2 to congenital debility.

Thirty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 19 being infants under one year, of whom 5 were under one month old, and 53 deaths were those of persons aged 65 years and upwards, of whom 39 were 70 years of age or over.

Of the 144 deaths recorded, 59 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 21st November in 105 large English towns (including London, in which the rate was 12·8) was equal to an average annual death-rate of 13·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·2 per 1,000 persons living, the rate for Glasgow being 18·5, and for Edinburgh 14·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

Annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1., and Rural No. 2. Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correct on for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 14·6 and 14·5; Dublin Registration Area, 15·8 and 14·8; Dublin County Borough, 18·0 and 15·8; Cork, 13·6 and 15·6; Limerick, 12·2 and 14·6; and Waterford, 7·6 and 9·0.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·5 per 1,000. One of the 9 deaths from all causes for Limerick was from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 200—95 boys and 105 girls—and the deaths to 143—68 males and 75 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15·8 per 1,000 of the population. During the forty-seven weeks ending with Saturday last the death-rate averaged 15·2 and was 3·5 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-seven weeks was 16·8, and during the corresponding periods of the preceding ten years, 20·3.

Included in the 133 deaths appertaining to the Area are 2 from measles, one from diphtheria, one from diarrhoea and enteritis of a child under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 2, 0 and one; deaths from diphtheria were 0, 0 and 2; deaths from diarrhoea and enteritis of children under 2 years were 6, 4 and 3; and deaths from influenza were one, 0 and one.

Tuberculous disease caused 19 deaths (13 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 4 from other forms of tuberculosis), as against 13, 22 and 16 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 13 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 12 from broncho-pneumonia, one from lobar pneumonia, and 3 from pneumonia (not otherwise defined). Bronchitis caused 20 deaths.

No deaths from violence were registered.

Among deaths of infants under one year old, one was due to pulmonary tuberculosis, one to tuberculous meningitis, one to syphilis, one to meningitis, 2 were due to bronchitis, 4 to broncho-pneumonia, one to diarrhoea and enteritis, one to premature birth, one to congenital malformation, and 2 to congenital debility.

Twenty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 16 being infants under one year, of whom one was under one month old, and 39 deaths were those of persons aged 65 years and upwards, of whom 26 were 70 years of age or over.

Of the 133 deaths recorded, 40 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 28th November in 105 large English towns (including London, in which the rate was 14·6) was equal to an average annual death-rate of 14·8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 18·7 per 1,000 persons living, the rate for Glasgow being 21·7, and for Edinburgh 17·4.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles; scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 28th November, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

| POPULATION. | | | Annual Rate per 1,000 Persons Represented by DEATHS. | | | BIRTHS | | DEATHS. | | | | | | | | | | | | | | | | CAUSED BY | | METEOROLOGY. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,

Sabh lá de mhí na Nodlag, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·3 and 15·5; Dublin Registration Area, 17·3 and 16·2; Dublin County Borough, 17·1 and 16·9; Cork, 15·0 and 17·0; Limerick, 10·8 and 12·9; and Waterford, 24·7 and 12·8.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·7 per 1,000. Two of the 4 deaths from all causes for Sligo were from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 197—114 boys and 83 girls—and the deaths to 159—82 males and 77 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 17·3 per 1,000 of the population. During the forty-eight weeks ending with Saturday last the death-rate averaged 15·2 and was 3·5 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-eight weeks was 16·8, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 145 deaths appertaining to the Area are one from enteric fever, one from measles, one from scarlet fever, one from diphtheria, 3 from diarrhoea and enteritis of children under 2 years, and 2 from influenza. In the 3 preceding weeks deaths from measles were 0, one and 2; deaths from diphtheria were 0, 2 and one; deaths from diarrhoea and enteritis of children under 2 years were 4, 3 and 1; and deaths from influenza were 0, one and one. There were no deaths from enteric fever or scarlet fever in the three preceding weeks.

Tuberculous disease caused 12 deaths (8 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and one from miliary tuberculosis), as against 22, 16 and 19 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 13 by diseases of the heart.

There were 20 deaths from pneumonia, comprising 13 from broncho-pneumonia, one from lobar pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 24 deaths.

Four accidental deaths were registered, one (that of a child aged 2 years and 10 months) being due to burns. There was also one death by suicide.

Among deaths of infants under one year old, one was due to measles, one to convulsions, 3 to were due to broncho-pneumonia, one to pneumonia, 3 to diarrhoea and enteritis, 4 to premature birth, one to congenital malformation, and 2 to congenital debility.

Thirty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 18 being infants under one year, of whom 9 were under one month old, and 52 deaths were those of persons aged 65 years and upwards, of whom 37 were 70 years of age or over.

Of the 145 deaths recorded, 63 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 28th November in 105 large English towns (including London, in which the rate was 17·4) was equal to an average annual death-rate of 16·3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 19·3 per 1,000 persons living, the rate for Glasgow being 21·7, and for Edinburgh 17·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

the annual rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, or residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 12TH DECEMBER, 1925. [PRICE 1½d. NET.]

Oifig um Chlárú Ghenearálta,

Baile Átha Cliath,

15mh lá de mhí na Nodlag, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 16·9 and 16·1; Dublin Registration Area, 18·5 and 17·2; Dublin County Borough, 18·0 and 17·7; Cork, 19·0 and 17·0; Limerick, 5·4 and 10·2; and Waterford, 11·4 and 13·8.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·0 per 1,000. Among the 6 deaths from all causes for Sligo were one from measles, one from influenza and one from gastro-enteritis of a child under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 174—86 boys and 88 girls—and the deaths to 167—73 males and 94 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 18·5 per 1,000 of the population. During the forty-nine weeks ending with Saturday last the death-rate averaged 15·3 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the forty-nine weeks was 16·9, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 155 deaths appertaining to the Area are one from scarlet fever, one from whooping-cough, 4 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the 3 preceding weeks deaths from scarlet fever were 0, 0 and one; deaths from whooping-cough were one, 0 and 0; deaths from diphtheria were 2, one and one; and deaths from diarrhoea and enteritis of children under 2 years were 3, 1 and 3.

Tuberculous disease caused 10 deaths (all of which were from pulmonary tuberculosis), as against 16, 19 and 12 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer, and 16 by diseases of the heart.

There were 27 deaths from pneumonia, comprising 21 from broncho-pneumonia, and 6 from pneumonia (not otherwise defined). Bronchitis caused 20 deaths.

Two accidental deaths were registered, one (that of a child aged one year) being due to burns. There was also one death by homicide.

Among deaths of infants under one year old, one was due to whooping-cough, one to convulsions, one to bronchitis, 7 to broncho-pneumonia, 4 to diarrhoea and enteritis, 2 to premature birth, one to congenital malformation, and 4 to congenital debility.

Thirty-four of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 23 being infants under one year, of whom 7 were under one month old, and 54 deaths were those of persons aged 65 years and upwards, of whom 40 were 70 years of age or over.

Of the 155 deaths recorded, 59 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 12th December in 105 large English towns (including London, in which the rate was 18·9) was equal to an average annual death-rate of 17·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 20·6 per 1,000 persons living, the rate for Glasgow being 22·4, and for Edinburgh 19·9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 12th December, 1925, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs OR URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

| POPULATION. | | | Annual Rate per 1,000 Persons Represented by | | BIRTHS | | DEATHS. | | | | | | | | | | | | | | CAUSED BY | | | | | | | | | | | | | | METEOROLOGY. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

Baile Átha Cliath,
22ahh lá de mhí na Nodlag, 1925.*

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population :—

Twelve Town Districts, 17·0 and 16·2; Dublin Registration Area, 16·8 and 17·1; Dublin County Borough, 17·4 and 17·6; Cork, 15·6 and 15·8; Limerick, 20·3 and 12·2; and Waterford, 9·5 and 13·3.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·6 per 1,000. Among the 15 deaths from all causes for Limerick was one from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 189—95 boys and 94 girls—and the deaths to 156—86 males and 70 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16·8 per 1,000 of the population. During the fifty weeks ending with Saturday last the death-rate averaged 15·3 and was 3·4 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the fifty weeks was 16·9, and during the corresponding periods of the preceding ten years, 20·2.

Included in the 141 deaths appertaining to the Area are one from measles, one from scarlet fever, one from diphtheria, 2 from diarrhoea and enteritis of children under 2 years, and one from influenza. In the 3 preceding weeks deaths from measles were 2, one and 0; deaths from scarlet fever were 0, one and one; deaths from diphtheria were one, one and 4; deaths from diarrhoea and enteritis of children under 2 years were 1, 3 and 4; and deaths from influenza were one, 2 and 0.

Tuberculous disease caused 14 deaths (13 of which were from pulmonary tuberculosis, and one from tuberculosis of the spine), as against 19, 12 and 10 from all forms of tuberculosis in the three weeks preceding.

Four deaths were caused by cancer, and 18 by diseases of the heart.

There were 16 deaths from pneumonia, comprising 9 from broncho-pneumonia, 2 from lobar pneumonia and 5 from pneumonia (not otherwise defined). Bronchitis caused 21 deaths.

One accidental death (that of a child aged 7 months), caused by burns, was registered.

Among deaths of infants under one year old, one was due to infantile paralysis, one to convulsions, one to bronchitis, 3 to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation, and one to congenital debility.

Thirty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 20 being infants under one year, of whom 5 were under one month old, and 39 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 141 deaths recorded, 64 occurred in hospitals and other public institutions..

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 19th December in 105 large English towns (including London, in which the rate was 17·3) was equal to an average annual death-rate of 16·4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 18·3 per 1,000 persons living, the rate for Glasgow being 20·0, and for Edinburgh 19·9.

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DÚN LAOGHAIRE;

AND TO

ELEVEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTAT ÉIREANN

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER SACKVILLE STREET, DUBLIN.

No. 51 VOL. LXII.] WEEK ENDED SATURDAY, 26TH DECEMBER, 1925. [PRICE 1½d. NET.

Oifig um Chláirí Gheneardlta,

Baile Átha Cliath,

30adh lá de mhí na Nodlag, 1925.

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12·2 and 15·6; Dublin Registration Area, 12·5 and 16·3; Dublin County Borough, 13·1 and 16·4; Cork, 10·2 and 15·0; Limerick, 14·9 and 12·9; and Waterford, 5·7 and 12·8.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 0·9 per 1,000. Among the 15 deaths from all causes for Cork were one from scarlet fever and one from diarrhoea of a child under 2 years; among the 11 deaths for Limerick were one from measles and one from diphtheria; and 3 of the 5 deaths for Tralee were from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 111—53 boys and 58 girls—and the deaths to 116—53 males and 63 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12·5 per 1,000 of the population. During the fifty-one weeks ending with Saturday last the death-rate averaged 15·2 and was 3·6 below the mean rate for the corresponding portions of the ten years 1915-24. The rate for all deaths registered during the fifty-one weeks was 16·9, and during the corresponding periods of the preceding ten years, 20·3.

Included in the 105 deaths appertaining to the Area are one from measles, one from scarlet fever, one from whooping-cough, one from diphtheria, one from diarrhoea and enteritis of a child under 2 years, and 2 from influenza. In the 3 preceding weeks deaths from measles were one, 0 and one; deaths from scarlet fever were one, one and one; deaths from whooping-cough were 0, one and 0; deaths from diphtheria were one, 4 and one; deaths from diarrhoea and enteritis of children under 2 years were 3, 4 and 2; and deaths from influenza were 2, 0 and one.

Tuberculous disease caused 11 deaths (8 of which were from pulmonary tuberculosis, and 3 from general tuberculosis), as against 12, 10 and 14 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 14 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 5 from pneumonia (not otherwise defined). Bronchitis caused 17 deaths.

Four accidental deaths were registered, of which one was caused by burns, one (that of a child aged 3½ years) by scalds, and one by a motor vehicle.

Among deaths of infants under one year old, 2 were due to convulsions, one to bronchitis, 2 to broncho-pneumonia, one to pneumonia, one to enteritis, 4 to premature birth, and 2 to congenital debility.

Twenty-one of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 13 being infants under one year, of whom 8 were under one month old, and 38 deaths were those of persons aged 65 years and upwards, of whom 29 were 70 years of age or over.

Of the 105 deaths recorded, 39 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 26th December in 105 large English towns (including London, in which the rate was 14·0) was equal to an average annual death-rate of 13·7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16·5 per 1,000 persons living, the rate for Glasgow being 18·7, and for Edinburgh 13·7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 26th December, 1925**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

(a) See note at foot of fourth page. (b) According to the Census of 1911, but in the cases of the Dublin Registration Area with its component parts, and Belfast and Londonderry, the population given is that estimated to the middle of 1925. The estimate shown for London relates to the civil population in 1924. The populations given for Glasgow and Edinburgh is that estimated to the middle of 1925. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, at foot of first page.

DEATHS,

TWELVE TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the eleven principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population represented thereby, which, for the purposes of these Returns, is estimated at 673,256, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 21·3 and 16·9; Dublin Registration Area, 22·3 and 17·5; Dublin County Borough, 22·4 and 17·7; Cork, 25·2 and 17·5; Limerick, 29·8 and 17·6; and Waterford, 11·4 and 9·5.

The deaths from the principal epidemic diseases,† recorded for the Twelve Town Districts during last week were equal to an annual rate of 1·4 per 1,000. Among the 22 deaths from all causes for Limerick were two from measles; among the 5 deaths for Drogheda were three from whooping-cough; and one of the 3 deaths for Tralee was from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 258—143 boys and 115 girls—and the deaths to 208—108 males and 100 females.

The deaths registered, omitting the deaths (numbering 21) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 22·3 per 1,000 of the population. During the fifty-two weeks ending with Saturday last the death-rate averaged 15·4 and was 3·3 below the mean rate for the ten years 1915-24. The rate for all deaths registered during the fifty-two weeks was 17·0, and during the preceding ten years, 20·2.

Included in the 187 deaths appertaining to the Area are two from measles, two from scarlet fever, five from diphtheria, three from diarrhoea and enteritis of children under 2 years, and three from influenza. In the 3 preceding weeks deaths from measles were 0, one and one; deaths from scarlet fever were one, one and one; deaths from diphtheria were 4, one and one; deaths from diarrhoea and enteritis of children under 2 years were 4, 2 and one; and deaths from influenza were 0, one and 2.

Tuberculous disease caused 18 deaths (12 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 3 from other forms of tuberculosis), as against 10, 14 and 11 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 24 by diseases of the heart.

There were 28 deaths from pneumonia, comprising 16 from broncho-pneumonia, 4 from lobar pneumonia, and 8 from pneumonia (not otherwise defined). Bronchitis caused 25 deaths.

Four accidental deaths were registered, 2 of which were caused by motor vehicles. There was also one death by homicide.

Among deaths of infants under one year old, one was due to diphtheria, one to tabes mesenterica, 3 were due to bronchitis, 5 to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, 3 to premature birth, and 4 to congenital debility.

Thirty-seven of the deaths registered during the week, appertaining to the Area, were those of children under 5 years of age, 21 being infants under one year, of whom 6 were under one month old, and 58 deaths were those of persons aged 65 years and upwards, of whom 35 were 70 years of age or over.

Of the 187 deaths recorded, 80 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 2nd January in 105 large English towns (including London, in which the rate was 18·9) was equal to an average annual death-rate of 17·9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 18·0 per 1,000 persons living, the rate for Glasgow being 19·3, and for Edinburgh 18·8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 2nd January, 1926, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 11 COUNTY BOROUGHs or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

TABLE IV.—Showing the NUMBER OF CASES of the undermentioned DISEASES treated in Dublin Hospitals during the week ended **Saturday, 2nd January, 1926**, with the number under treatment at the close of each of the last four weeks.

| DISEASES. | No. of Cases in Hospital at close of week ended | | | Week ended 2nd January | | | |
|---------------|--|---------|---------|------------------------|------------------|-------|--|
| | Dec. 12 | Dec. 19 | Dec. 26 | No. admitted. | Dis- charged. | Died. | No. under treatment at close of week. |
| Enteric Fever | 15 | 17 | 14 | 6 | 1 | . | 19 |
| Typhus | . | . | . | . | . | . | . |
| Small-pox | . | . | . | . | . | . | . |
| Measles | 14 | 24 | 22 | 22 | 6 | . | 38 |
| Scarlet Fever | 95 | 103 | 104 | 24 | 21 | 4 | 103* |
| Diphtheria | 39 | 36 | 32 | 16 | 2 | 3 | 43 |
| Pneumonia | 30 | 24 | 19 | 13 | 3 | 1 | 28 |

* Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, or residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Twelve Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.
